PUBLIC HEALTH SIGNIFICANCE OF GROUPS INCLUDED IN THE KEY

COMMON NAME PUBLIC HEALTH SIGNIFICANCE

Ant bite, sting; infest stored food; damage wood.

Bat associated with rabies, histoplasmosis and many other diseases.

Bed Bug cause dermatitis; not known to transmit disease. Bee, Hornet, etc. bite and sting; infest stored food; damage wood.

infest stored food; infest human intestine; cause dermatitis. Beetle

Bird associated with histoplasmosis, ornithosis and many other diseases.

Book Louse, Psocid infest stored food.

Caterpillar sting; infest intestinal tract.

Centipede venomous bite; infest nasal, intestinal, and urinary tracts.

Chewing Louse infest domestic birds and mammals.

Cockroach transmit enteric diseases.

Collembola infest stored food; used as indicator organisms for pesticide studies. Copepod involved in transmission of broad fish tapeworm and guinea worm.

Daddy Long-leg Spider infest houses; harmless.

Earwig household pests.

Flea cause dermatitis; transmit plague, murine typhus, tapeworms.

Fly some bite; larvae infest human flesh; transmit typhoid, paratyphoid.

cholera, bacillary dysentery, infantile diarrhea, amebic dysentery, giardiasis, helminths, trachoma, conjunctivitis, yaws, anthrax, tularemia, African sleeping sickness, leishmaniasis, onchocerciasis, loiasis, bartonellosis, sandfly fever.

Ked or Louse Fly occasionally bite man. Kissing Bug transmit Chagas disease.

Lagomorph transmit tularemia and many other diseases. Lobster, Crab, etc. involved in transmission of oriental lung fluke.

Millipede exude vesicating venom; infest digestive and urinary tract; inter-

mediate host of tapeworms.

Mite cause dermatitis; infest human intestine; transmit scrub typhus, rick-

ettsialpox, epidemic hemorrhagic fever.

Mosquito transmit malaria, encephalitis, yellow fever, dengue, filariasis. Moth or Butterfly infest stored food; infest human intestine; some have stinging hairs.

Pseudoscorpion infest houses; harmless.

Rodent transmit leptospirosis, lymphocytic choriomeningitis, etc.

Scorpion sting.

Sea Spider appearance causes fear; harmless.

Silverfish, Firebrat infest stored food; transmit enteric diseases. Snake venomous bite; secondary infection of bites.

Sowbug, Pillbug household pests; harmless.

Spider venomous bite.

Sucking Louse cause dermatitis; transmit epidemic typhus, trench fever, relapsing

Sun Spider non-venomous bite.

Termite destroy wood; housing deterioration.

Thrips bite man occasionally.

Tick cause dermatitis, tick paralysis; transmit spotted fever, relapsing

tularemia, Colorado tick fever, Russian spring-summer en-

cephalitis.

Whip Scorpion appearance causes fear; harmless.

INTRODUCTION

Public health biologists are often responsible for teaching animal identification to personnel (sanitarians, engineers, physicians, veterinarians, etc.) without special training in taxonomy. One of the most successful devices for such training has been the pictorial key. The first U.S. Public Health Service pictorial key was devised by Stanley B. Freeborn and Eugene J. Gerberg (1943) to guide personnel in the identification of anopheline mosquito larvae during our national malaria control program.

After the Centers for Disease Control and Prevention (CDC) was founded (1946) additional keys were developed. At present the CDC utilizes more than 75 such keys in its regular training program. These are the major items incorporated into this booklet. Apropos morphological diagrams are also included.

Precise identification of disease vectors is essential to their efficient control. In using the following keys it should be remembered that only a few of them include all species in a group, and that determinations made using them are only tentative.

The pictorial keys are typical of identification keys found in reference works and scientific papers except that they are arranged as diagrams and are illustrated. After making the first choice offered at the top of each page, follow the black lines or indicated numbers to secondary choices until the correct identification has been made. Note that, in some cases, the identification can be made in the first choice.

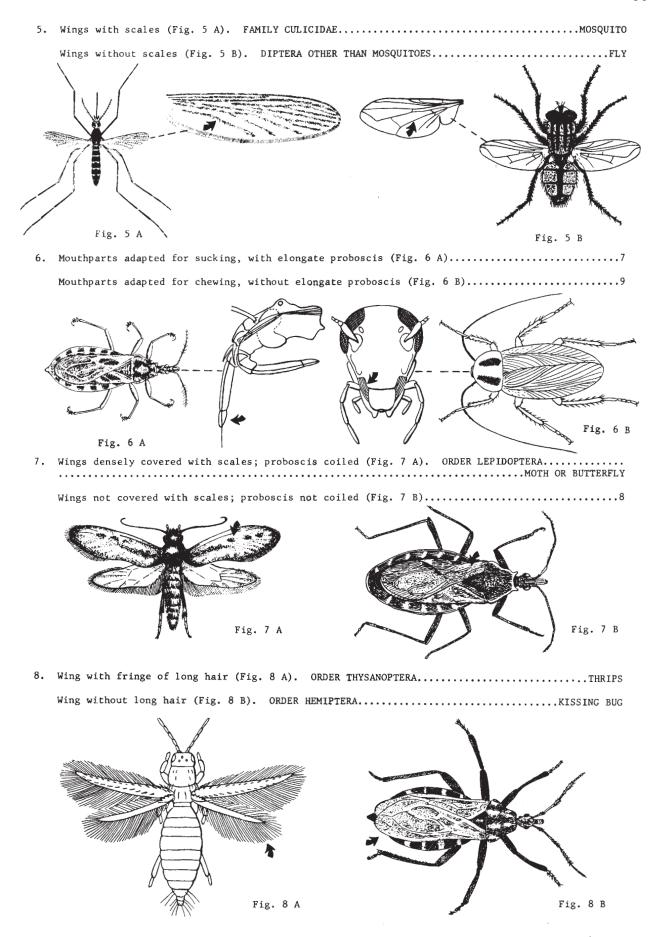

Note: The differing formats and typography in this publication were deliberately selected to:

- (1) Provide a brood spectrum of taxonomic experience;
- (2) Avoid the stultifying effect of monotonous repetition.

ARTHROPODS OF PUBLIC HEALTH IMPORTANCE: KEY TO COMMON CLASSES AND ORDERS Harold George Scott and Chester J. Stojanovich 1. Three or 4 pairs of walking legs (Fig. 1 A & B)......2 Fig. 1 C Fig. 1 B _ _ mouthparts Fig. 2 A Fig. 2 B 3. Wings present, well developed (Fig. 3 A)......4 Fig. 3 C Fig. 3 A Fig. 3 B 4. With one pair of membranous wings (Fig. 4 A). ORDER DIPTERA......5 With two pairs of wings (Fig. 4 B & C)......6

Rhipicephalus sanguineus BROWN DOG TICK

HUMAN ECTOPARASITES: KEY TO COMMON GROUPS Chester J. Stojanovich and Harold George Scott

CRUSTACEA: KEY TO SOME MAJOR ORDERS Chester J. Stojanovich and Harold George Scott

1.	With abdominal appendages (Fig. 1 A)
	Without abdominal appendages (Fig. 1 B)
	Fig. 1 B
	Carapace present (Fig. 2 A)
	Carapace absent (Fig. 2 B)
Fig.	Ψ V V
3.	With dorsal shield (Fig. 3 A). SHIELD SHRIMPOrder NOTOSTRACA
	Without dorsal shield (Fig. 3 B)4
	Fig. 3 A

4. With bivalve shell (Fig. 4 A). SHELL SHRIMP......Order CONCHOSTRACA Without bivalve shell (Fig. 4 B)......5 interior view Fig. 4 B Fig. 4 A 5. First pleopod rudimentary (Fig. 5 A). OPOSSUM SHRIMP.....Order MYSIDACEA First pleopod well-developed (Fig. 5 B, C & D). SHRIMP, CRAYFISH, LOBSTERS, CRABS.....Order DECAPODA Fig. 5 A Fig. 5 B 6. Body laterally compressed (Fig. 6 A). SAND FLEAS, ETC..... Order AMPHIPODA Body dorso-ventrally compressed (Fig. 6 B). SOWBUGS, PILLBUGS, ETC.....Order ISOPODA Fig. 6 A

7. Body not completely enlosed in a bivalve shell (Fig. 7 A)......8 Body completely enclosed in a bivalve shell (Fig. 7 B). OSTRACODS...... Order PODOCOPA Fig. 7 B Fig. 7 A interior view Body not segmented (Fig. 8 B). WATER FLEAS,.....Order CLADOCERA Fig. 8 A 9. Eyes stalked (Fig. 9 A). FAIRY SHRIMP......Order ANOSTRACA Eyes not stalked (Fig. 9 B). COPEPODS........................ Order EUCOPEPODA Fig. 9 A Fig. 9 B

CENTIPEDES: KEY TO SOME IMPORTANT UNITED STATES SPECIES Harold George Scott

1.	8 dorsal plates: 15 pairs of long legs EASTERN HOUSE CENTIPEDE, Scutigera cleoptrata
	More than 14 dorsal plates 2
	Scutigera cleoptrata
2.	15 pairs of legs (Lithobius)
	21-23 pairs of legs (Scolopendra)
	More than 30 pairs of legs (Geophilus)
3.	Antenna 19-23 segmented
	Antenna 33-43 segmented
4.	Anal legs as long as or longer than 3 terminal body segments
	WESTERN HOUSE CENTIPEDE, Scolopendra heros
	Anal legs shorter than 3 terminal body segments
	Scolopendra heros
5.	47-53 pairs of legs
	64-67 pairs of legs
6.	With 2 longitudinal black lines
	Without longitudinal black lines

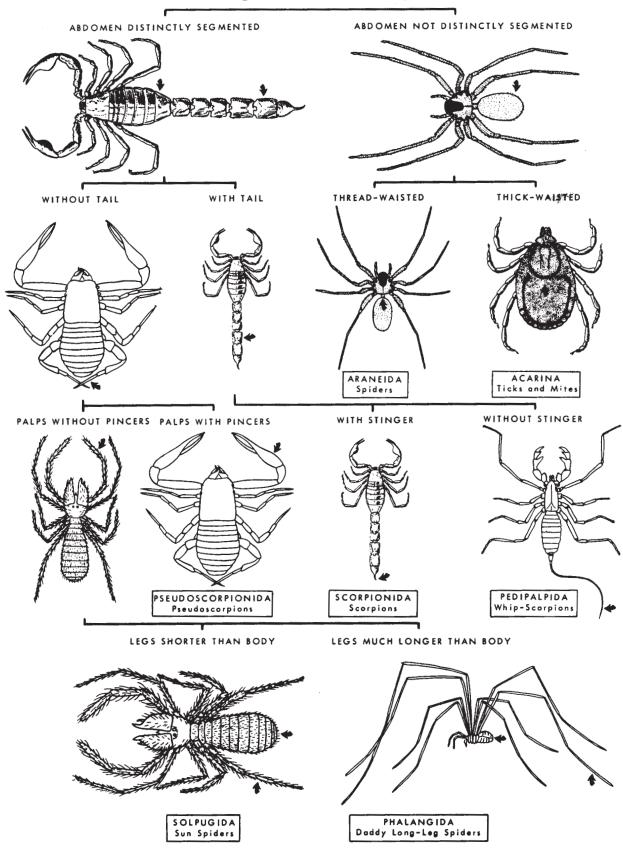

MILLIPEDES: KEY-TO SOME IMPORTANT UNITED STATES SPECIES Harold George Scott, Ph.D.

1.	20-21 body segments
	More than 29 body segments 3
2.	Legs with basal spines
	Legs without basal spines Pseudopolydesmus serratus
	Tractification of the second o
	Narceus americanus
3.	Body segment 3 with legs
	Body segment 3 without legs

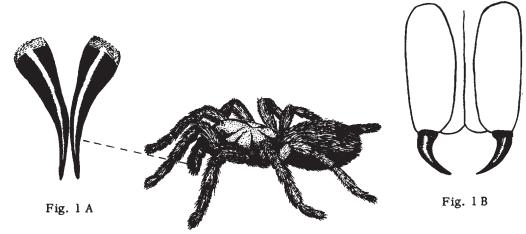

Brachyiulus pusillus

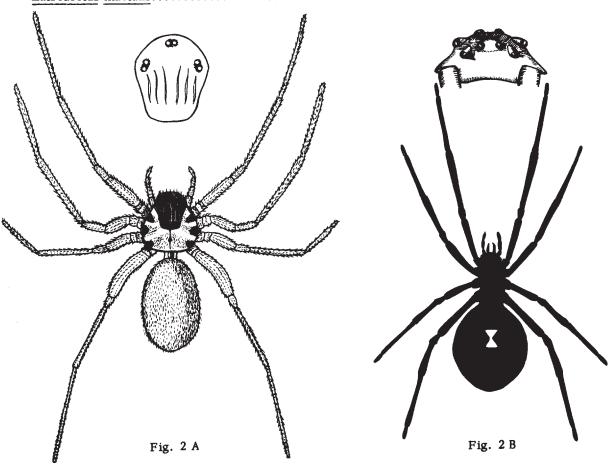

ARACHNIDA: KEY TO COMMON ORDERS OF PUBLIC HEALTH IMPORTANCE Harold George Scott & Chester J. Stojanovich

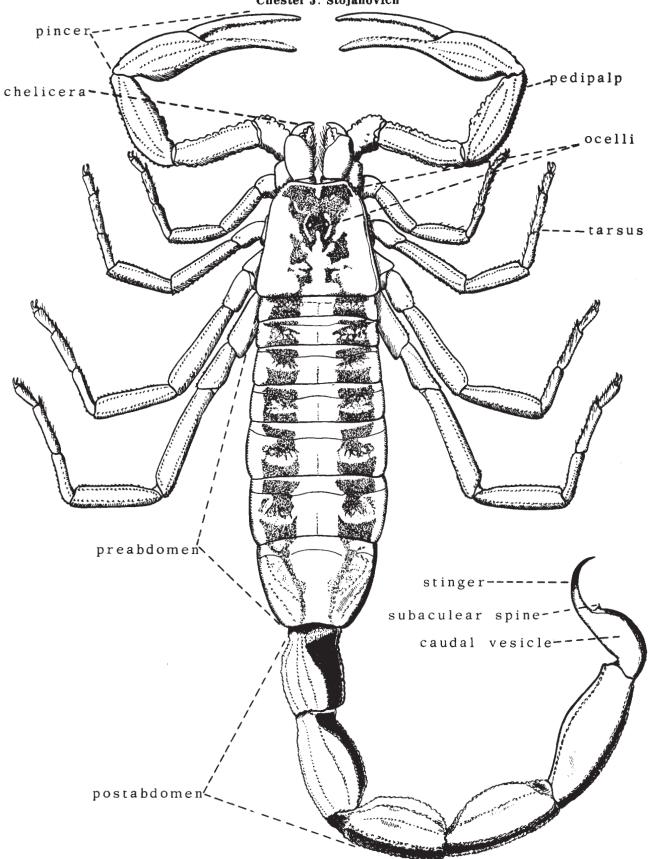

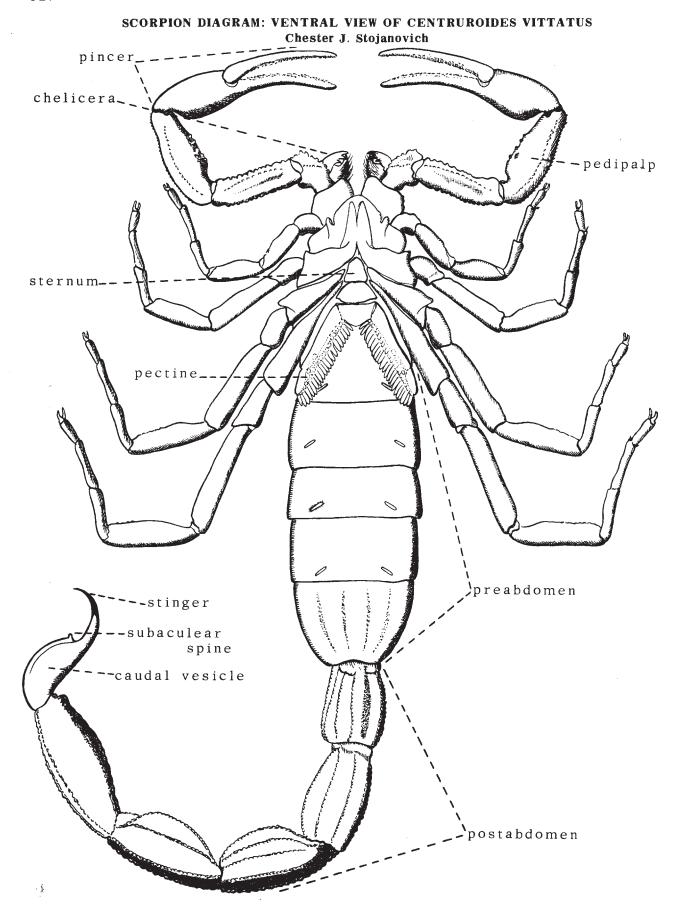

SPIDERS: KEY TO SOME IMPORTANT UNITED STATES SPECIES Harold George Scott & Chester J. Stojanovich

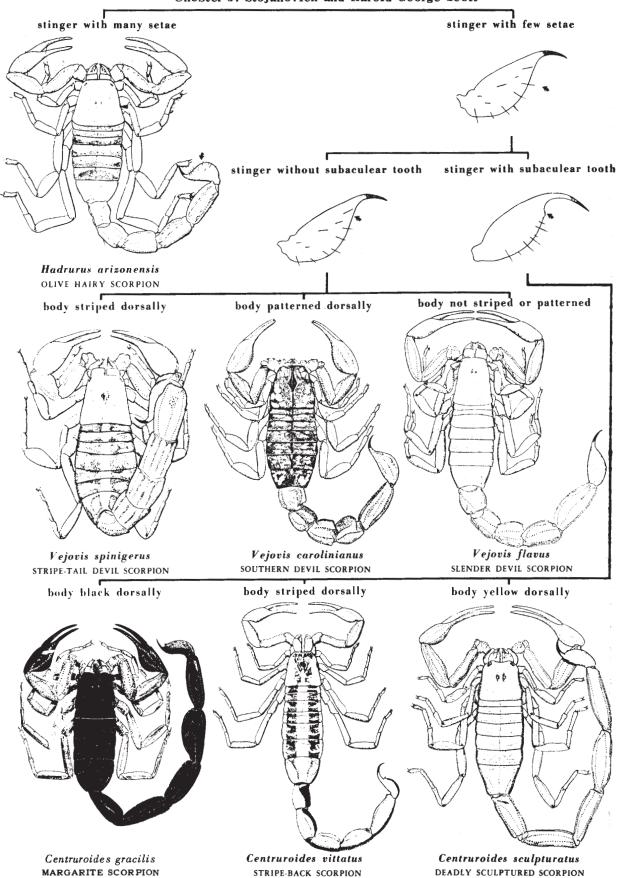

SCORPION DIAGRAM: DORSAL VIEW OF CENTRUROIDES VITTATUS
Chester J. Stojanovich

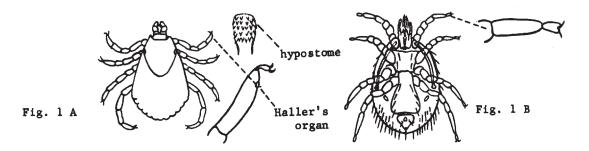

SCORPIONS: PICTORIAL KEY TO SOME COMMON UNITED STATES SPECIES Chester J. Stojanovich and Harold George Scott

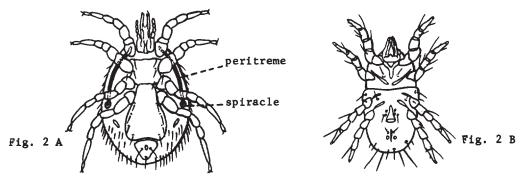

ACARINA: ILLUSTRATED KEY TO SOME COMMON ADULT FEMALE MITES AND ADULT TICKS Harry D. Pratt and Chester J. Stojanovich

1. Last segment of first leg with a depression known as Haller's organ; most species with a toothed hypostome on capitulum; size usually over 4 mm. (Fig. 1 A). Ticks21

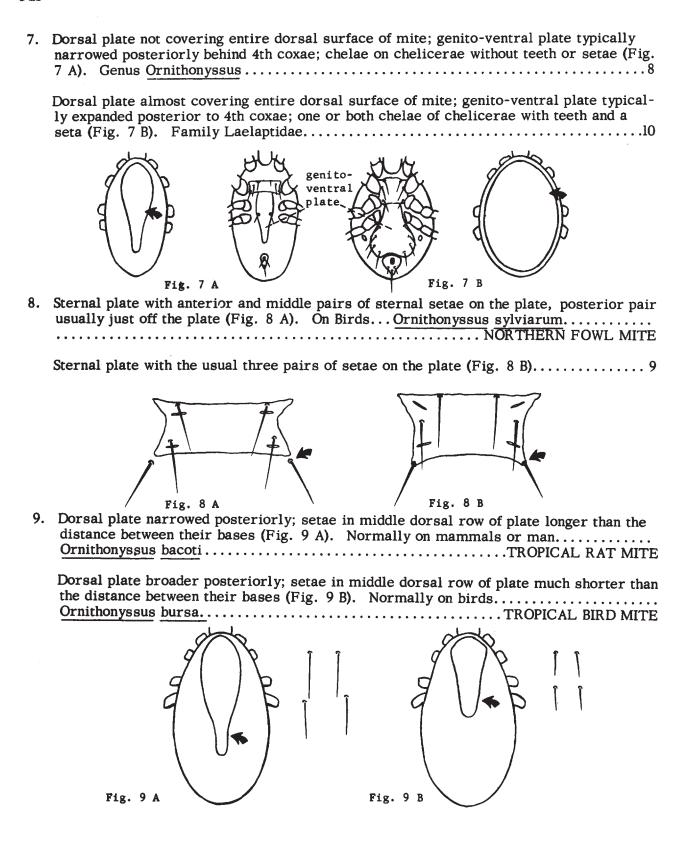

2. Respiratory system with a spiracle on each side opening lateral to the bases of the 3rd or 4th pair of legs, frequently spiracles leading into slender tubes that extend forward laterally to the bases of the 1st or 2nd pairs of legs Fig. 2 A). Mesostigmatid Mites. 3

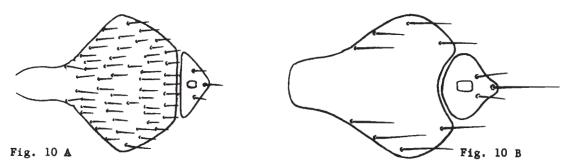

3. Anus surrounded by a plate bearing only 3 setae, one on each side and one behind the anal opening; first tarsus bearing caruncle and claws at tip (Fig. 3 A)..............................4

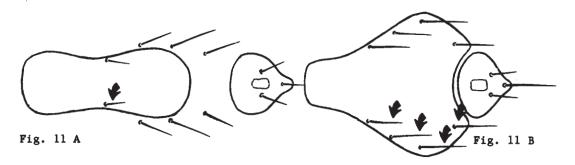

4. Anal opening more than its length behind anterior margin of anal plate; chelicerae strongly narrowed apically, needle-like, movable chela absent or extremely small (Fig. 4 A). Genus Dermanyssus 5 Anal opening less than its length or about its length, behind anterior margin of anal plate; chelicerae not narrowed apically and needle-like, shear-like, bearing conspicu-Fig. 4 A Dorsal surface of body with two plates, a large anterior plate and a small posterior Fig. 5 A Fig. 5 B 6. Peritreme tube somewhat sinuous and extending anteriorly to a point opposite coxa 2 Peritreme tube short, extending forward for a distance less than half the diameter of coxa 3 (Fig. 6 B). Dermanyssus americanus...... AMERICAN BIRD MITE 'peritreme' Fig. 6 B

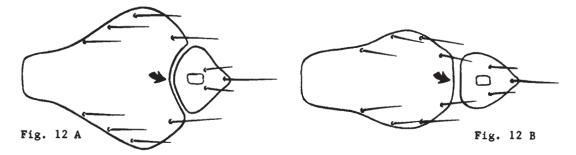

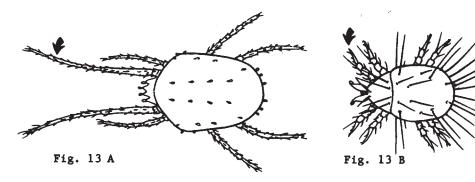

Genito-ventral plate with four pairs of setae (Fig. 11 B). Normally on domestic rats..12

12. Anal plate contiguous with the genito-ventral plate, anterior margin rounded and fitting into a strong concavity in genito-vental plate; larger species averaging 1-2 mm. long. (Fig. 12 A). Echinolaelaps echidninus...............................SPINY RAT MITE

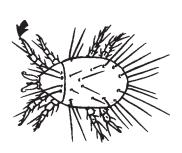

Fig. 14 A

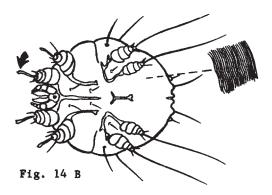

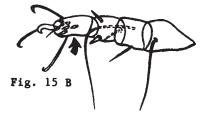

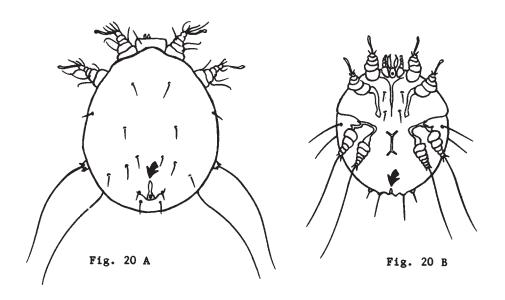

Fig. 15 A

16.	Body elongate, somewhat cigar-shaped and prolonged behind; the abdomen somewhat ringed; legs very short, apparently three-segmented; tiny species less than 1 mm. (Fig. 16 A). In hair follicles or sebaceous glands of mammals Demodex folliculorum
	Body not prolonged behind and cigar-shaped (Fig. 16 B). Occasionally female grain itch somewhat balloon-shaped; larger species not found in hair follicle or sebaceous glands of mammals
	Fig. 16 A Fig. 16 B
17.	A club-shaped or clavate hair between bases of first and second pairs of legs, body divided into cephalothorax and abdomen, the latter often enormously enlarged (Fig. 17 A) Pyemotes ventricosus formerly Pediculoides ventricosus
	Setae on cephalothorax normal, no club-shaped or clavate hair between bases of first and second pairs of legs; no distinct division into cephalothorax and abdomen (Fig. 17 B)
	Fig. 17 A
18.	Legs short and stubby (Fig. 18 A)
	Legs longer and more slender (Fig. 18 B)
	Fig. 18 A

19.	Suckers of tarsi with segmented pedicels (Fig. 19 A). Non-burrowing itch mites on mammals in the genus Psoroptes, a common species causing scabs and crusts in the ears of rabbits is the Psoroptes cuniculi	
		dicels (Fig. 19 B) Dermatophagoides scheremetewskyi
	Fig. 19 A	Fig. 19 B
20.	Anal opening on the dorsal surface of	the body; dorsal surface of the body with only

21. Capitulum at anterior end of body, visible from above and below; scutum or dorsal shield present, short in female, long in male (Fig. 21 A & B). Family Ixodidae. HARD TICKS...22 Capitulum on under side of body, hidden by body when seen from above though palpi may project anteriorly; scutum absent (Fig. 21 C & D). Family Argasidae.....SOFT TICKS....31 capitulum Fig. 21 A Fig. 21 B Fig. 21 C Fig. 21 D FAMILY IXODIDAE - HARD TICKS dorsal shield dorsal shield Fig. 2 A 23. Palpi long, much longer than basis capituli; second segment of palpus about twice as long as wide (Fig. 23A). Genus Amblyomma.....24 Palpi short, about as long as basis capituli; second segment of palpus about as long as ---palpal segments-----III--II Fig. 23A basis capituli Fig. 23 B basis capituli

Next to last segment of second, third, and fourth pairs of legs without paired terminal spurs; female with a distinct pale marking near posterior end of dorsal shield (Fig. 24 A). Amblyomma americanum.....LONE STAR TICK Next to last segment of second, third, and fourth pairs of legs with long, paired terminal spurs; female with more diffuse markings on dorsal shield (Fig. 24 B)...... Amblyomma maculatum......GULF COAST TICK Fig. 4 A Fig. 4 B 25. Spiracular plate without dorsal prolongation (Fig. 25 A). Dermacentor albipictus...... Fig. 25 A Fig. 25 B 26. Basis capituli with long cornua (Fig. 26 A). Dermacentor occidentalis .PACIFIC COAST TICK Fig. 26 A Fig. 26 B

Goblets of spiracular plate very small and numerous; east of the Rocky Mountains and on the Pacific coast. (Fig. 27 B). <u>Dermacentor variabilis</u>.....................AMERICAN DOG TICK

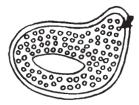

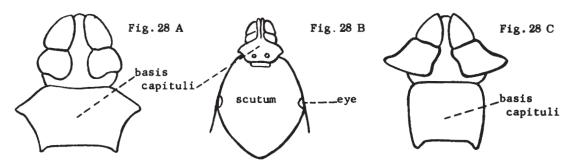

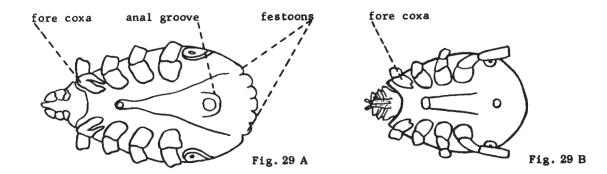

Fig. 27 A

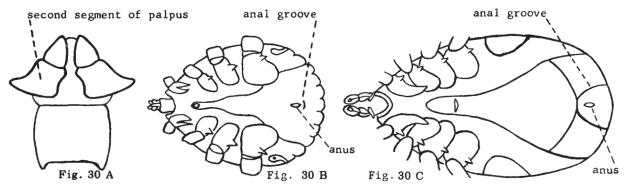

Fig. 27 B

30. Second segment of palpus laterally produced; anal groove behind anus, not attaining posterior margins of body (Fig. 30 A & B). <u>Haemaphysalis</u> <u>leporispalustris</u>.....RABBIT TICK

Second segment of palpus not laterally produced; anal groove extending as an inverted U from in front of anus to posterior margins of body (Fig. 30 C)................Genus <u>Ixodes</u>

FAMILY ARGASIDAE - SOFT TICKS

Margin of body lacking definite sutural line, thick and rounded (Fig. 31 B)......32

TICKS: KEY TO GENERA IN UNITED STATES Harry D. Pratt

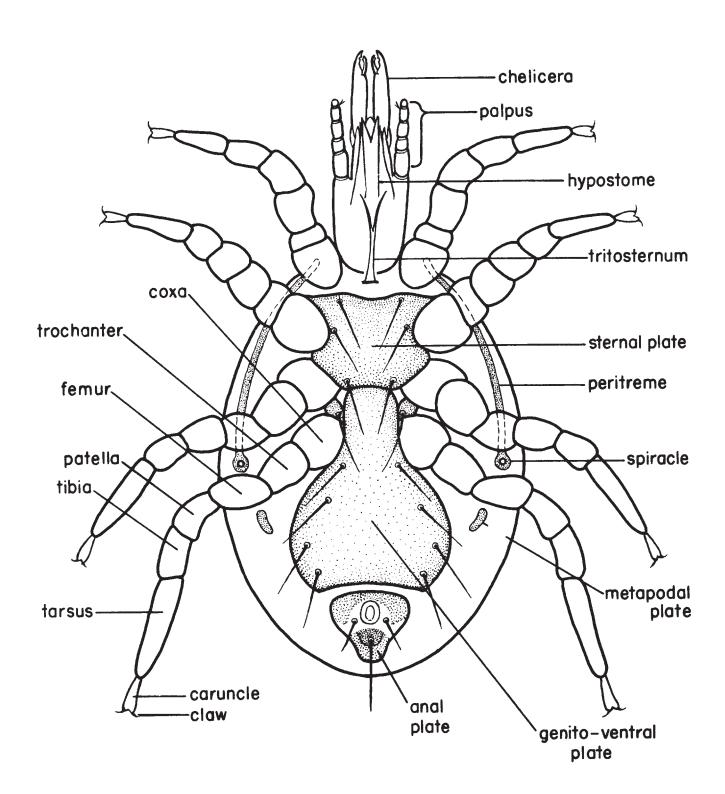

TICKS AND MITES: KEY TO SPECIES COMMONLY INFESTING PIGEONS Harold George Scott & Chester J. Stojanovich

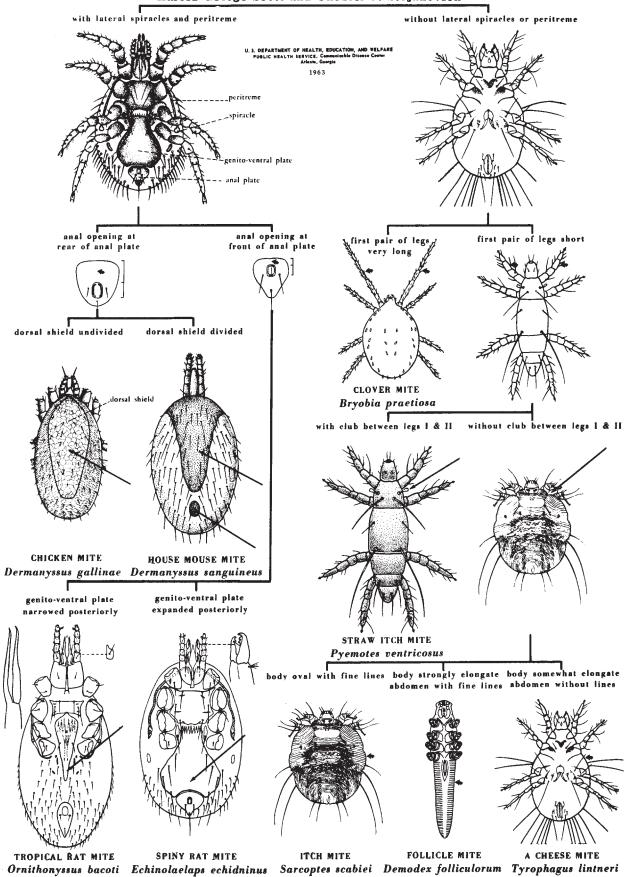

TICKS: PICTORIAL KEY TO SOME COMMON SPECIES Harry D. Pratt

MITE DIAGRAM WITH STRUCTURES LABELED Harry D. Pratt

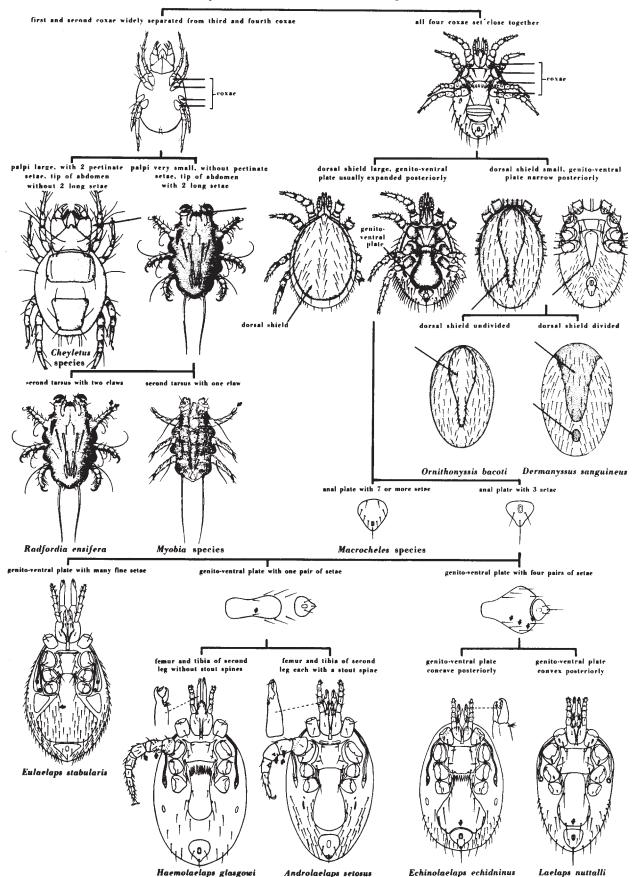

MITES: PICTORIAL KEY TO SOME COMMON SPECIES OF PUBLIC HEALTH IMPORTANCE Harold George Scott and Chester J. Stojanovich

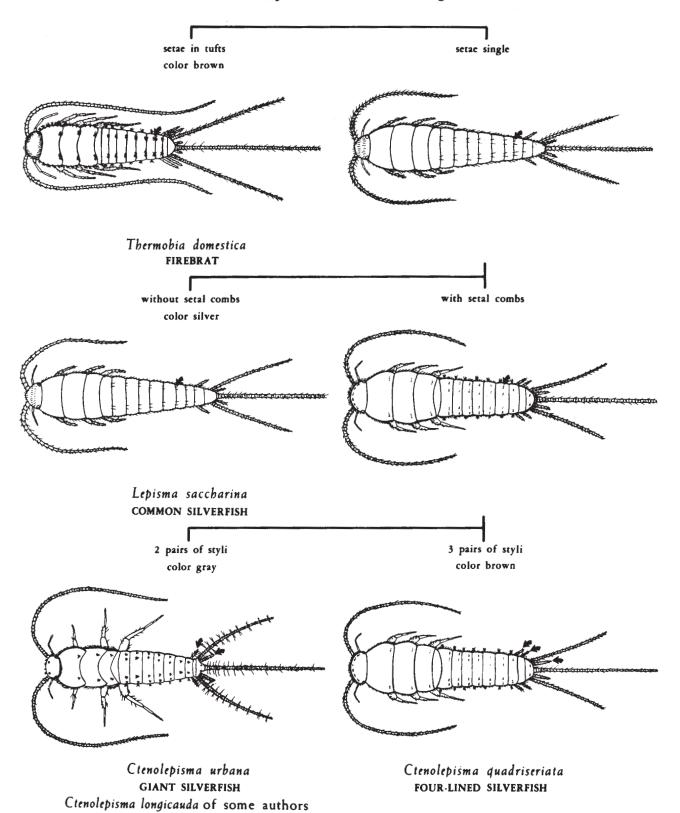

MITES: KEY TO SOME SPECIES COMMONLY INFESTING HOUSEHOLDS AND STORED FOOD Harold George Scott

1.	With club-like hair between bases of legs I and II
2.	Claws, if present, not on stalks (Glycyphagus domesticus, formerly
3.	Internal apical hair (on joint between femur I and tibia I) less than three times as long as external apical hair
	Acarus farinae
4.	Tarsus with one stout dorsal and five small ventral terminal spines
	(Acarus siro, formerly Tyroglyphus siro) GRAIN MITE
	Tarsus with only three small ventral spines (Tyrophagus castellani,
	formerly Tyroglyphus longior)
5.	Tarsus IV of female ending in claws and a fleshy protuberance; leg
	IV of male smoothly curved inwards (Pyemotes ventricosus, formerly Pediculoides ventricosus)
	Tarsus IV of female ending in two long hairs of unequal length; leg 1V of male sharply bent (Tarsonemus floricolus)
	Pyemotes ventricosus

AMERICAN COCKROACH

COCKROACHES: KEY TO SOME COMMON SPECIES FOUND IN THE UNITED STATES Harry D. Pratt & Chester J. Stojanovich

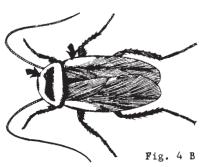

1. Middle and hind femora both with numerous strong spines along the ventral margin (Fig. 1 A)..2

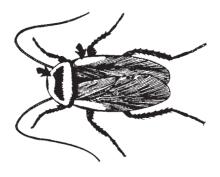

2. Comparatively large species 18 mm. or longer; subgenital plate of female divided longitudinally, valvular (Fig. 2 A); male styli similar, slender, elongate and straight (Fig. 2 B)......3

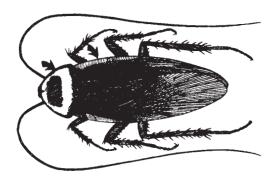

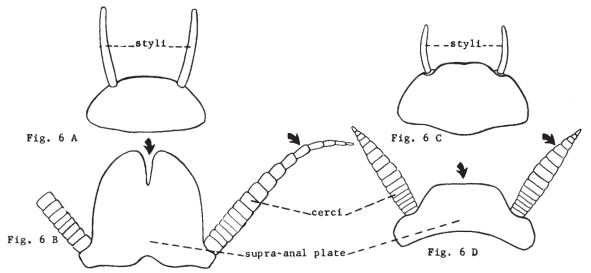

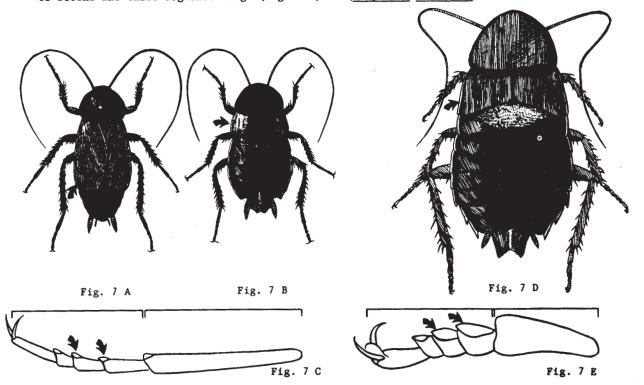

Fig. 5 A

Fig. 5 B

Mahogany brownish species, 30-40 mm. long; front wings reduced to short pads, not widely separated (Fig. 7 D); first segment of hind tarsus shorter than segments 2-5 combined, pulvilli of second and third segments large (Fig. 7 E)....(Eurycotis floridana) LARGE FLORIDA COCKROACH

8. Pronotum with two conspicuous longitudinal dark bars on a pale background (Fig. 8 A).........9

Pronotum variously marked, but without two conspicuous dark longitudinal bars (Fig. 8 B)....10

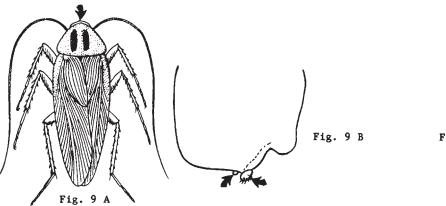

Fig. 8 /

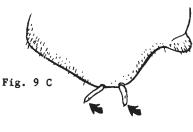

Fig. 8 B

9. Face pale (Fig. 9 A); male subgenital plate asymmetrical, styli very unequal, short and rounded (Fig. 9 B)......(<u>Blattella germanica</u>) GERMAN COCKROACH

Face dark; male subgenital plate almost symmetrical, styli somewhat elongate and subequal in size (Fig. 9 C)......(Blattella vaga) FIELD COCKROACH

10. Pronotum with a broad dark central stripe; front wings of both sexes appearing to have two transverse brownish bars, some pale specimens showing bars poorly (Fig. 10 A). Width of pronotum usually not exceeding 4.5 mm......(Supella supellectilium) BROWN-BANDED COCKROACH

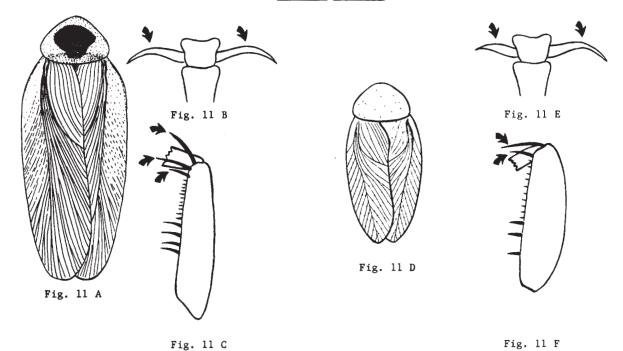

Fig. 10 A

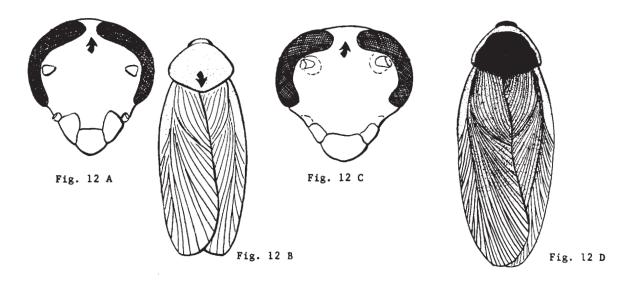

Fig. 10 B

11. Larger species 9-25 mm. or more in length; front wing without small dark spots in winged specimens (Fig. 11 A); claws equal (Fig. 11 B); ventral anterior margin of front femur with 3 long apical spines (Fig. 11 C)......(Parcoblatta species) WOOD COCKROACHES

Small species, 8-9 mm. long; front wing with small dark spots (Fig. 11 D); claws unequal (Fig. 11 E); ventral anterior margin of front femur with 2 long apical spines (Fig. 11 F)...
.....(Ectobius pallidus) SPOTTED MEDITERRANEAN COCKROACH

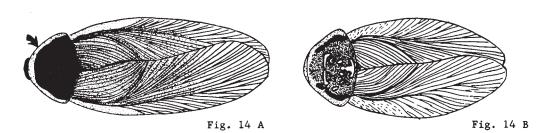

12. Top of eyes close together (Fig. 12 A); general color a nearly uniform greenish; posterior margin of pronotum somewhat angularly produced (Fig. 12 B) (Panchlora nivea) CUBAN COCKROACH

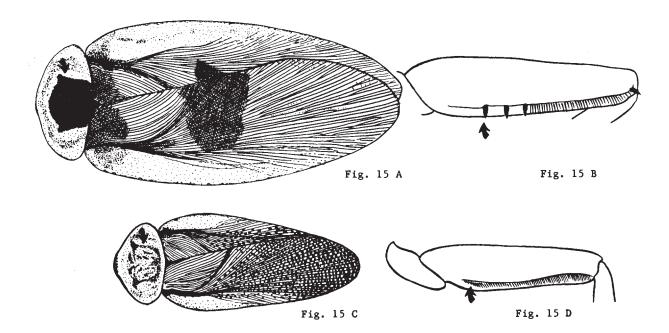

- 13. Medium sized species, 30 mm. or less in length, including folded wings (Fig. 14 A & B)......14

 Large species 40 mm. or more in length, including folded wings (Fig. 15 A & C)...............15
- 14, Pronotum uniformly blackish except a narrow yellowish band along anterior and lateral margins (Fig. 14 A)......(Pycnoscelus surinamensis) SURINAM COCKROACH

 Pronotum pale with a narrow dark longitudinal submarginal band on each side and irregular brownish blotches on disc (Fig. 14 B).............(Nauphoeta cinerea) CINEREOUS COCKROACH

TERMITES: KEY TO SOME COMMON NORTH AMERICAN SPECIES **Harold George Scott**

	Fig. A - Winged Adult Fig. B - Soldier Fig. C - Worker				
Key to Winged Adults					
1.	Radius without branches; fontanel (fig. E) usually present				
2.	Tibia (fig. F) slightly to plainly blackish				
3.	Tibia slightly darkened; length 9 mm.; British Columbia to Baja California, east to Idaho and Sonora (Reticulitermes hesperus)				
4.	Ocelli (fig. E) present				
5.	Body yellow to light brown 6 Body blackish; California to Baja California, east to Arizona and Utah (Kalotermes minor)				
6.	Transverse rows of long hairs on tergites; South Carolina to Florida, west to eastern Texas (Kalotermes snyderi)				
	(Procryptotermes hubbardi)ARID DRY-WOOD TERMITE				
	ocelli gula fontanel				
	Fig. D - Wing Fig. E - Head Fig. F - Leg Fig. G - Throat				
	Key to Soldiers				
1.	Fontanel (fig. E) present; eyes usually absent				
2.	Gula (fig. G) not twice as broad in front as in middleARID SUBTERRANEAN TERMITE Gula twice as broad in front as in middle				
	Head twice as long as broad				
4.	Antenna (fig. E) with 23-31 segments				
5.	Third antennal segment as long as next 3 combined				

EARWIGS: PICTORIAL KEY TO COMMON DOMESTIC SPECIES Chester J. Stojanovich and Harold George Scott

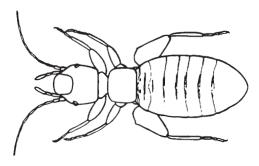

RING-LEGGED EARWIG Euborellia annulipes

SEASIDE EARWIG Anisolabis maritima

PSOCIDS: KEY TO SOME SPECIES COMMONLY INFESTING STORED FOOD Harold George Scott and Chester J. Stojanovich

1. Two distinct thoracic segments	
Three distinct thoracic segments (Trogium pulsatorium)	DEATH WATCH
2. Without large pronotal bristles	
3. Eye with 7 facets; head and body brown (Liposcelis bostrychopilus) Eve with 2—4 facets; head brown, body yellow (Liposcelis paetus)	

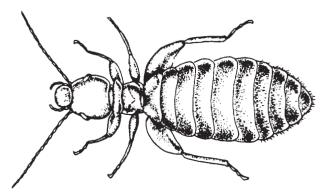

Warehouse Psocid

4. Two to 5 large pronotal bristles (Liposcelis entomophilus)

One large pronotal bristle (Liposcelis terricolus)

PEDICULUS HUMANUS

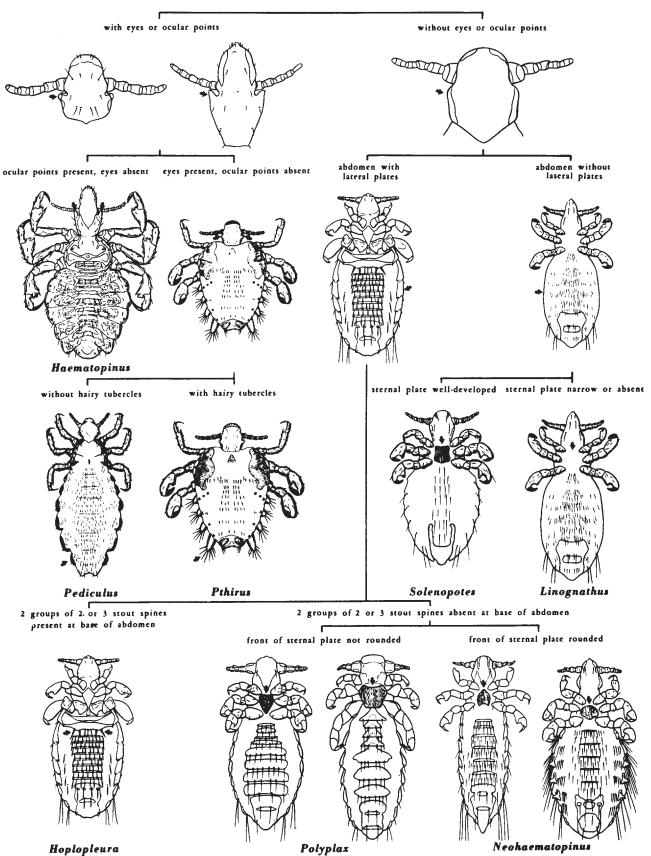

PHTHIRUS PUBIS

ANOPLURA: PICTORIAL KEY TO SPECIES ON DOMESTIC RATS IN SOUTHERN UNITED STATES Roy F. Fritz and Harry D. Pratt

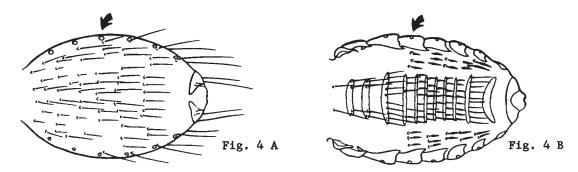

ANOPLURA: PICTORIAL KEY TO SOME COMMON GENERA OF SUCKING LICE Chester J. Stojanovich and Harry D. Pratt

ANOPLURA: KEY TO NORTH AMERICAN SPECIES Chester J. Stojanovich and Harry D. Pratt

Key to Families of Anoplura

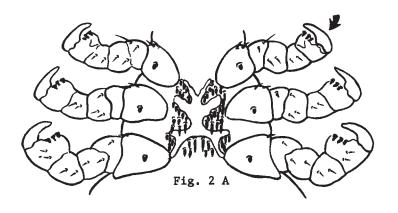

1. Head and thorax more or less thickly covered with setae; in some species the setae are modified into scales (Fig. 1 A). On marine animals......FAMILY ECHINOPHTHIRIIDAE Head and thorax with only a few setae (Fig. 1 B)..... Fig. 1 B Fig. 1 A 2. Eyes present or with prominent ocular points (Fig. 2 A & B)...... Eyes and ocular points absent (Fig. 2 C)......4 Fig. 2 B Fig. 2 C Fig. 2 A 3. Abdomen without irregular sclerotized plates on dorsum and venter (Fig. 3 A). On man. Abdomen with irregular sclerotized plates on dorsum and venter (Fig. 3 B). On hoofed animals......FAMILY HAEMATOPINIDAE Fig. 3 B Fig. 3 A

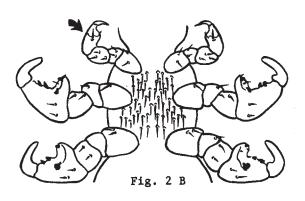

Key to Genera of Echinophthiriidae

Key to Species of Antarctophthirus

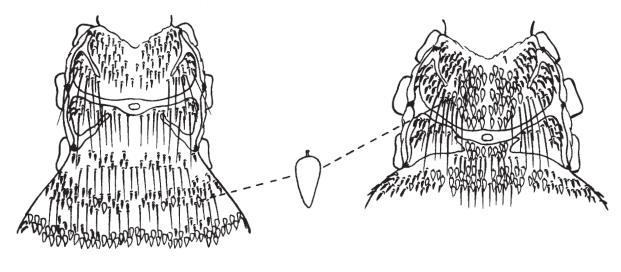

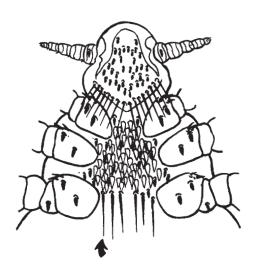

Fig. 1 A Fig. 1 B

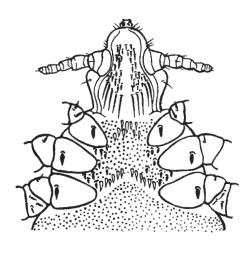

Fig. 2 B

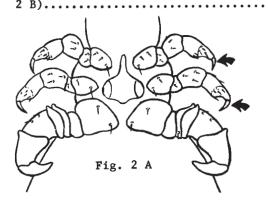

Key to Genera of Haematopinidae

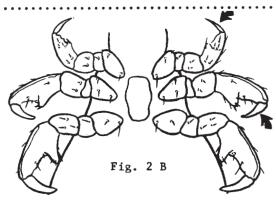

1. Sternal plate of thorax present; eyes absent but with prominent ocular points (Fig. 1 A) Sternal plate of thorax absent; eyes present (Fig. 1 B). On peccary......<u>Pecaroecus</u> javalii Babcock & Ewing Fig. 1 A Fig. 1 B Key to Species of Haematopinus 1. Thoracic sternal plate wider than long, sternal pits on plate (Fig. 1 A). Hog louse....<u>Haematopinus</u> <u>suis</u> (Linnaeus) Fig. 2 A Fig. 2 B 2. Head at least two times as long as wide at ocular points; sternal plate without a median projection (Fig. 2 A & B). On equines. Horse sucking louse...... Head not two times as long as wide at ocular points; sternal plate with a median pro-0

Fig. 2 A Fig. 2 B Fig. 2 C

Fig. 2 D

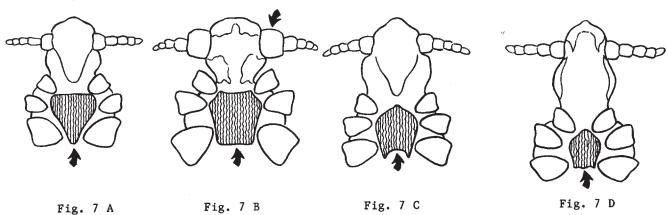

3. Thoracic sternal plate with median projection blunt and rounded; male genital plate with six setae (Fig. 3 A & B). Short-nosed cattle louse..... Thoracic sternal plate with median projection more acute and longer; male genital plate with four setae (Fig. 3 C & D). Cattle tail louse..... Fig. 3 C Fig. 3 D Fig. 3 A Fig. 3 B Key to Genera of Hoplopleuridae 1. Paratergal plates very small being merely slightly sclerotized points (Fig. 1 A)......<u>Haemodipsus</u> Paratergal plates on at least one abdominal segment usually as long as, or at least half as long as, the sternal plate (Fig. 1 B)..... Fig. 1 A First and second pair of legs of the same size and form, both being more slender and smaller than the third pair of legs (Fig. 2 A)......3 First pair of legs smallest of the three pairs; the second pair with stouter claws (Fig.

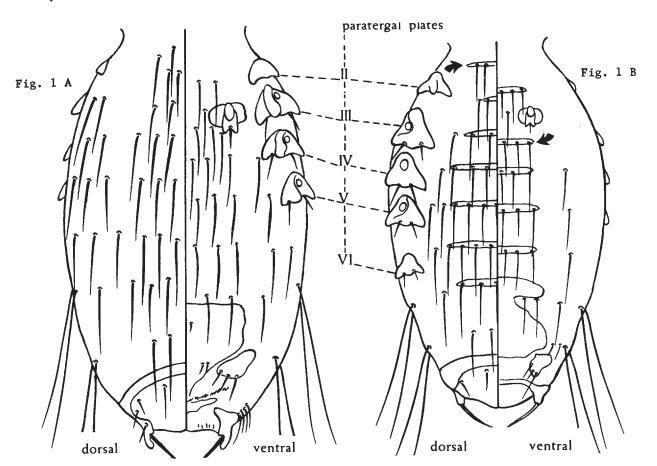

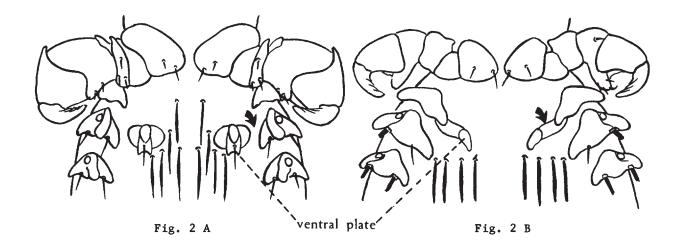

3. A pair of small sclerotized plates present on venter of abdominal segment 2 (Fig. 3 A); antennae and head without hook-like processes...............................Enderleinellus Sclerotized plates entirely lacking on venter of abdominal segment 2; antennae and head Fig. 3 B Fig. 3 A Antennae four-segmented (sometimes appearing three-segmented); bladder-like expansions Antennae five-segmented; bladder-like expansions lacking on third leg (Fig. 4 C).....5 Fig. 4 B Fig. 4 C Fig. 4 A 5. First sternite of abdominal segment 3 extended laterally to articulate with its corresponding paratergal plate; this sternite bearing two groups of two or three stout setae First sternite of abdominal segment 3 never articulating with paratergal plate (Fig. 5 B) Fig. 5 A Fig. 5 B 6. Paratergal plate 2 completely divided longitudinally, one plate on the dorsum and the Paratergal plate 2 never completely divided to form two distinct plates (Fig. 6 B)....7 Fig. 6 A Fig. 6 B

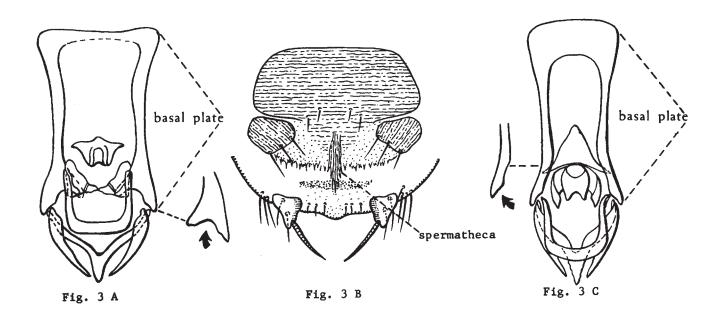

7. Sternal plate of thorax usually pointed posteriorly or, if truncate, always associated with a huge enlargement of the first antennal segment (Fig. 7 A & B)...........Polyplax

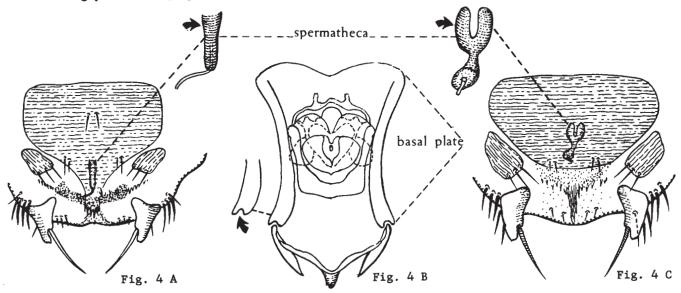

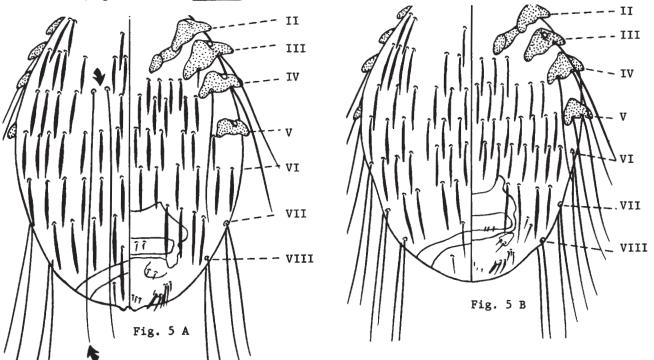

Key to Species of Enderleinellus

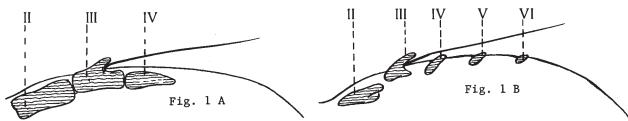

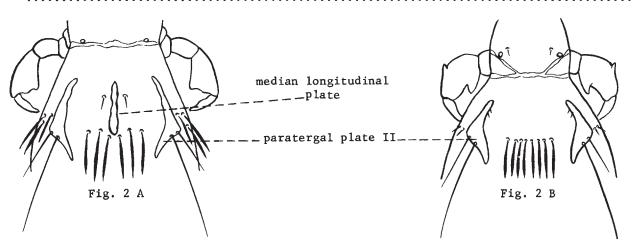

6. Female with 2-4 long setae on dorsum of abdominal segment 4 reaching to apex of body (Fig. 5 A). On <u>Citellus</u> and <u>Cynomys........Enderleinellus</u> <u>osborni</u> (Kellogg & Ferris)

Female without such setae. On Citellus.............Enderleinellus suturalis (Osborn)

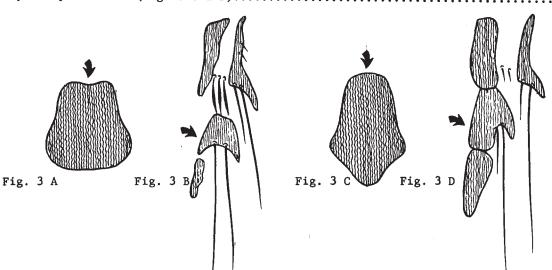

Key to Species of Fahrenholzia

Dorsal surface of abdomen without such a plate (Fig. 2 B). On Perognathus and Dipodomys

Thoracic sternal plate convex on anterior margin; dorsal lobe of paratergal plate 3 apically truncate (Fig. 3 C & D)......4

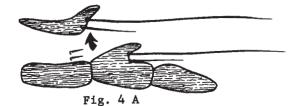

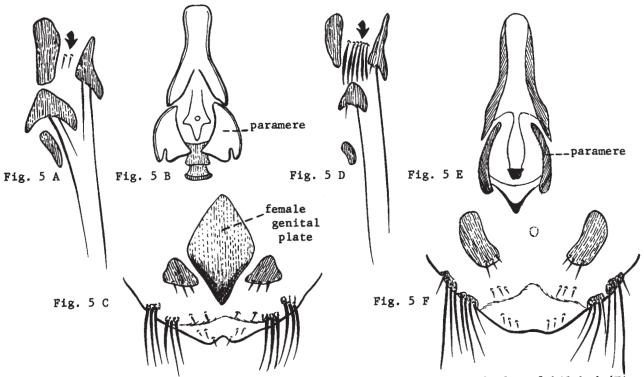

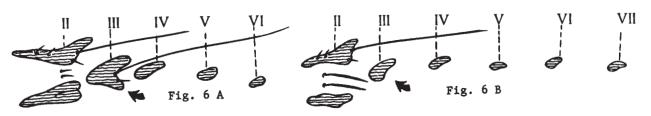

Fig. 4 B

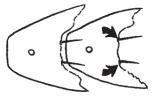

Key to Species of Hoplopleura

1. Third abdominal sternal plate with two groups of two stout setae (Fig. 1 A)......2 Third abdominal sternal plate with two groups of three stout setae (Fig. 1 B)...... Keplopleura trispinosa Kellogg & Ferris Fig. 1 A Fig. 1 E 2. Posterior margins of paratergal plates 3-5 with a broad or pointed lobe on each side (Fig. 2 A & B)......3 Posterior margins of paratergal plates 3-5 with four rounded lobes (Fig. 2 C)...... 0 Fig. 2 B Fig. 2 C Fig. 2 A 3. Paratergal plates 4 and 5 with broad lobes on posterior margin (Fig. 3 A)......4 4. Paratergal plates 4 and 5 with one large and one minute seta on posterior margin (Fig. 4 A).....5 Paratergal plates 4 and 5 with two large setae on posterior margin (Fig. 4 B).....

ig. 4 B

5. Abdomen with setae in some of the membrane between sternal and paratergal plates (Fig. 5 Abdomen without setae in membrane between ends of sternal and paratergal plates (Fig. 5 Fig. 5 A Fig. 5 B 6. Thoracic sternal plate pointed posteriorly (Fig. 6 A). On Peromyscus......*Hoplopleura hesperomydis (Osborn) and *Hoplopleura ferrisi Cook & Beer Thoracic sternal plate blunt posteriorly (Fig. 6 B). On Onychomys...... Fig. 6 A Fig. 6 B 7. Thoracic sternal plate about as long as broad; first sternal plate on abdominal segment 3 with two stout setae usually set close together on each side (Fig. 7 A)......8 Thoracic sternal plate definitely longer than broad; first sternal plate on abdominal segment 3 with two stout setae more widely spaced on each side (Fig. 7 B)......9 Fig. 7 A Fig. 7 B

*These species are separated only in the immature stages.

8. Paratergal plate 6 with posterior angles produced into points (Fig. 8 A). On Eutamias

Hoplopleura arboricola Kellogg & Ferris

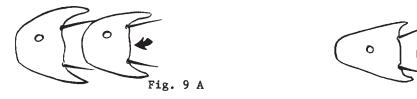

Paratergal plate 6 without points on posterior angles (Fig. 8 B). On Tamias....

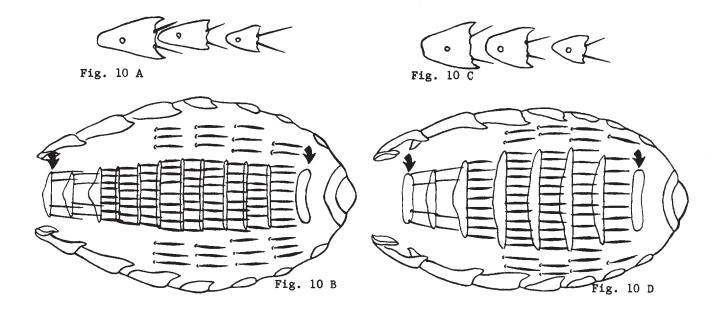

Hoplopleura erratica (Osborn)

Fig. 8 A

Fig. 8 B

Posterior margin of paratergal plate 6 with angles not produced to form a deep emargination (Fig. 9 B). On Sigmodon......10

3. Posterior angle of first antennal segment with a stout spine (Fig. 3 A). On Eutamias...

Neohaematopinus pacificus (Kellogg & Ferris)

Posterior angle of first antennal segment without a stout spine (Fig. 3 B)...........4

4. Abdominal tergal and sternal plates present on each segment in both sexes (Fig. 4 A).... On <u>Citellus tereticaudus................Neohaematopinus citellinus Ferris</u> Abdominal tergal and sternal plates absent in the middle segments of female; male with only sternal plates absent (Fig. 4 B). On <u>Citellus spilosoma</u>..... Fig. 4 A Fig. 4 B 5. First antennal segment prolonged posterio-apically, with stout spine (Fig. 5 A)......6 First antennal segment without such a prolongation (Fig. 5 B)......8 Fig. 5 A Fig. 5 B 6. Female without sternal and tergal plates on abdominal segments except for the normal terminal and genital segments (Fig. 6 A). On <u>Sciurus</u> <u>griseicolus</u>.....Neohaematopinus griseicolus Ferris

Fig. 6 A

Fig. 6 B

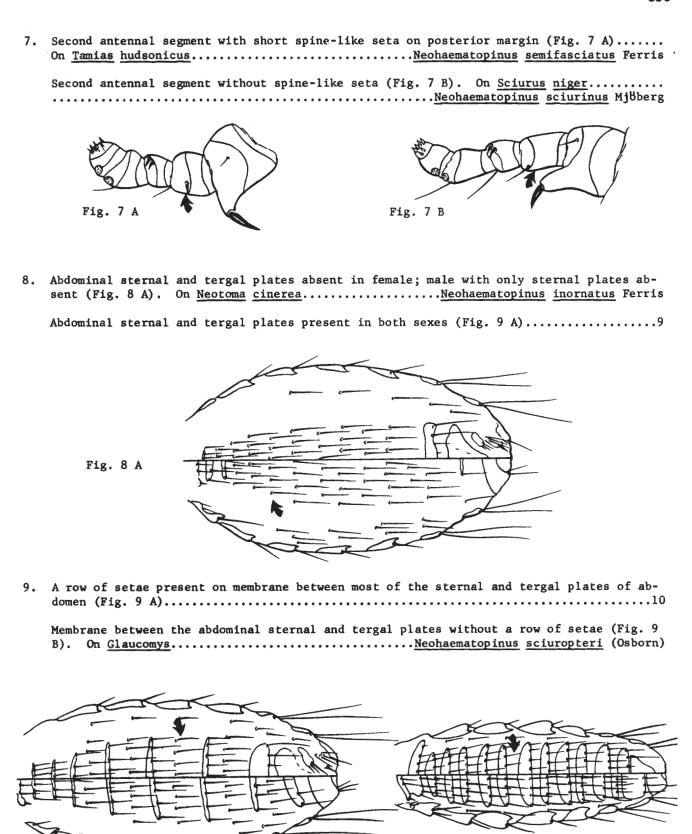

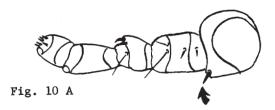

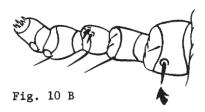

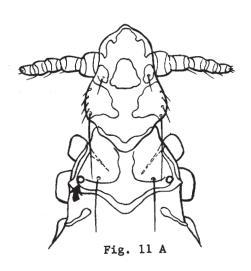

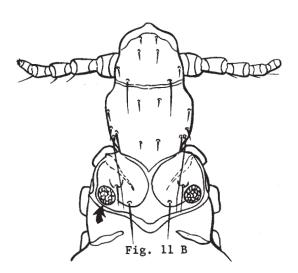

Fig. 9 B

Fig. 9 A

Key to Species of Polyplax

1. Sternal plate of thorax rounded or pointed posteriorly (Fig. 1 A)......2 Sternal plate of thorax truncate posteriorly (Fig. 1 B). On Peromyscus and Onychomys... Fig. 1 B Fig. 1 A Paratergal plate 4 with dorsal seta longer than ventral seta; usually as long or longer 3. Paratergal plates 3-5 with both apical angles produced into points (Fig. 3 A)...... On microtene mice......4 Paratergal plates 3-5 with only dorsal apical angle produced into a point (Fig. 3 B).... Fig. 3 A 4. First abdominal sternal plate strongly arcuate and with its lateral angles somewhat pro-First abdominal sternal plate not arcuate, its posterior margin almost straight and

Key to Genera of Linognathidae

1. Sternal plate of thorax at least half as wide as long (Fig. 1 A).....Solenopotes Sternal plate of thorax small and slender or completely lacking (Fig. 1 B)..Linognathus

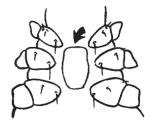

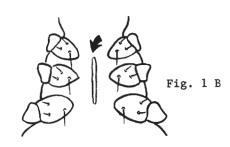

Fig. 1 A

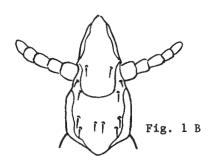

Key to Species of Linognathus

1. Head about as broad as long; antennae almost as long as head (Fig. 1 A)......2 Head almost twice as long as wide or longer; antennae noticeably shorter than head (Fig. 1 B)......3

Fig. 1 A

Thoracic dorsum with four long setae; head slightly longer than broad (Fig. 2 A). On dogs, foxes and ferrets. Dog sucking louse......Linognathus setosus (von Olfers) Thoracic dorsum with two long setae; head definitely as broad as long (Fig. 2 B)...... Sheep foot louse........................Linognathus pedalis (Osborn)

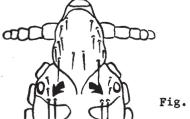

Fig. 2 A

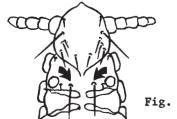

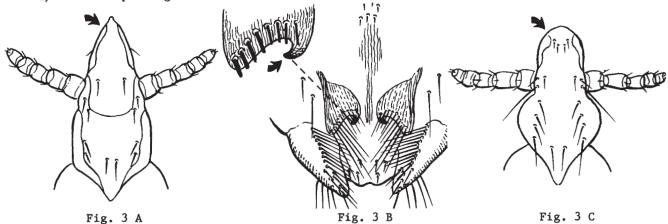

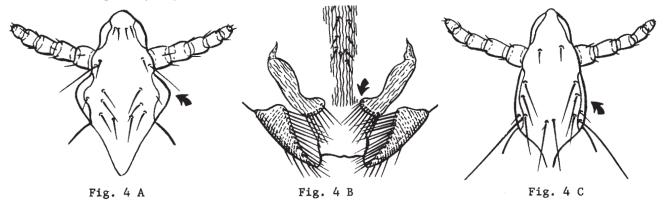

Fig. 2 B

3. Fore head acutely conical and much elongated; female gonopod with a sclerotized hook (Fig. 3 A & B). On cattle. Long-nosed cattle louse.....Linognathus vituli (Linnaeus)

Fore head rounded (Fig. 3 C); female gonopod rounded or with a slight tooth (Fig. 5 B & C). On sheep and goats......4

4. Head greatly expanded behind antennae; female gonopod rounded (Fig. 4 A & B). Goat sucking louse.....Linognathus africanus (Kellogg & Paine)

5. Thoracic spiracle large and conspicuous; female gonopod rounded (Fig. 5 A & B). Sheep louse.....Linognathus ovillus (Neumann)

Thoracic spiracle not large and conspicuous; female gonopod with a slight tooth (Fig. 5 C & D). Goat sucking louse......Linognathus stenopsis (Burmeister)

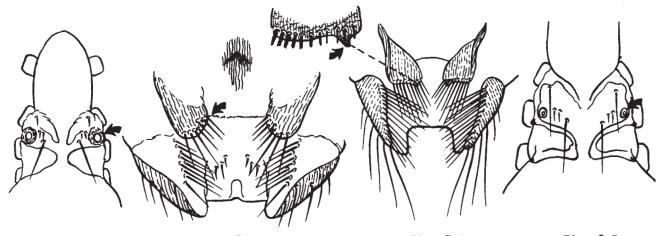

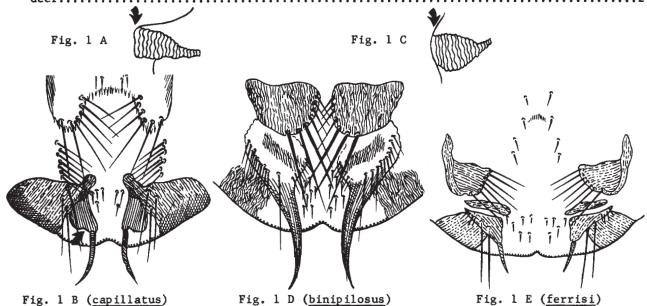

Fig. 5 A Fig. 5 B Fig. 5 C Fig. 5 D

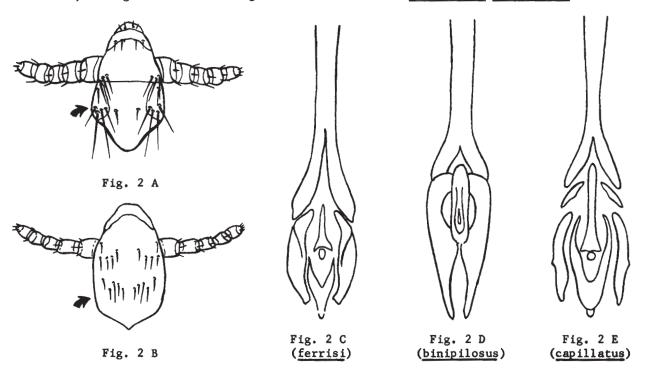

Key to Species of Solenopotes

1. Abdominal spiracles strongly protuberant (Fig. 1 A); female genitalia with apical processes strongly constricted near middle (Fig. 1 B); male genitalia as in figure 2 E. On cattle. Little blue cattle louse.......................Solenopotes capillatus Enderlein

Abdominal spiracles only slightly protuberant (Fig. 1 C); female genitalia with apical processes not constricted (Fig. 1 D & E); male genitalia as in figures 2 C & D. On deer.

2. Neck present, head with distinct posterior-lateral angles (Fig. 2 A); female genitalia as in figure 1 E; male genitalia as in figure 2 C......Solenopotes ferrisi (Fahrenholz)

STINGING CATERPILLARS: PICTORIAL KEY TO SOME IMPORTANT UNITED STATES SPECIES Harold George Scott & Chester J. Stojanovich

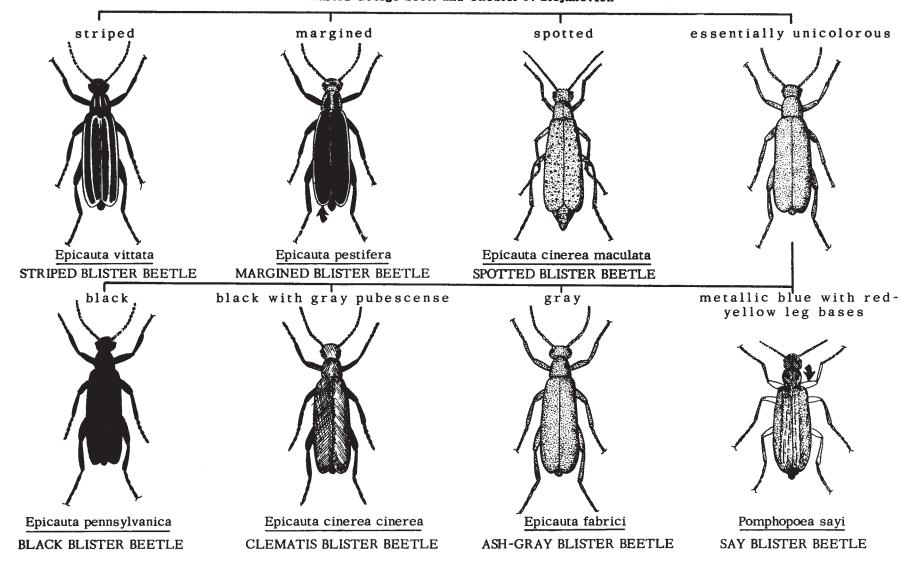

MOTHS: KEY TO SOME SPECIES COMMONLY ASSOCIATED WITH STORED FOOD Harold George Scott

Caterpillars
Pinkish larvae up to 3/5-inch long living in silken tubes and producing matter webbing in the infested food (Anagasta kuhniella)
Whitish larvae with or without black or orange markings
Black head and prothorax; orange markings at both ends of the body; living in silken tubes (Pyralis farinalis)
White to greenish-white larvae producing matter webbing in the infested food (Plodia interpunctella)
Wings unicolorous to slightly spotted; long fringe at rear of wings (Sitotroga cerealella)
Distal half of front wings dark; basal half light (Plodia interpunctella)
Basal and distal thirds of front wings dark; middle portion of front wings light (Pyralis farinalis)

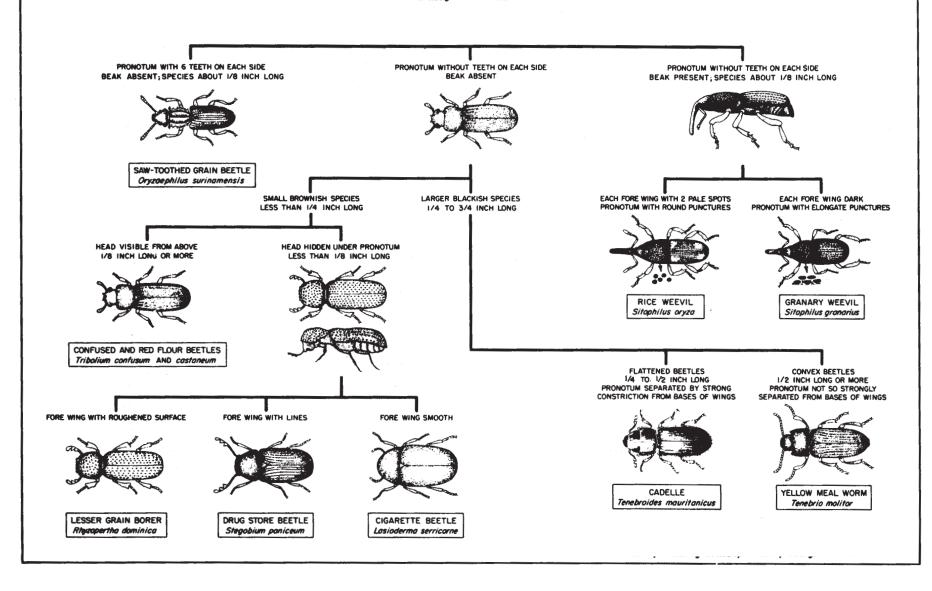

Angoumois Grain Moth

HYMENOPTERA: KEY TO SOME COMMON SPECIES WHICH STING MAN Harry D. Pratt and Chester J. Stojanovich

Fig. 1 A Fig. 1B 2. First (and sometimes second) segment of the abdomen node-like, clearly separated above and below from rest of abdomen (Fig. 2 A). Nest in ground, wood, or buildings (Family Formicidae)....ANT Abdomen with or without some constriction of first abdominal segments, but without true node Fig. 2B Fig. 2 A 3. All hairs on body simple, unbranched; hind tarsus slender, first segment not broadened or thickened (Fig. 3 A). (Superfamilies Vespoidea and Sphecoidea). Wasps and Hornets...... 4 At least some hairs on thorax branched or plumose; hind tarsus with first segment broadened and

Fig. 3 A

4. Pronotum extending entirely, or almost back, to the tegula (the scale covering base of fore-wing), Pronotum shortened, more or less collar-like, not extending back to tegula, its hind angles often wing tegula tegula pronotum pronotum pronotal lobe Fig. 4B Fig. 4 A 5. Fore wing almost always folded when in repose; first discoidal cell very long, as a rule much longer than the submedian cell (Fig. 5 A). Both solitary and colonial species (Family Vespidae).....6 Fore wing very rarely folded; first discoidal cell shorter than submedian cell (Fig. 5 B). Solitary submedian cell first discoidal cell submedian cell first discoidal cell Fig. 5 A Fig. 5B 6. One spur at tip of middle tibia; claws bifid, split at tip (Fig. 6 A). (Subfamily Eumeninae)...... Fig. 6 B Fig. 6 A

7. Clypeus (upper lip) broadly truncate and more or less notched at apex (Fig. 7 A); hind wing with-Clypeus somewhat pointed at apex (Fig. 7 C); hind wing with a lobe at anal angle (Fig. 7 D)...... Fig. 7 C Fig. 7 A anal lobe Fig. 7 D Fig. 7B 8. Oculo-malar space long, more than half the length of next to last antennal segment; vertical carina on pronotum (Fig. 8 A).....9 Oculo-malar space short, less than half the length of next to last antennal segment; no vertical carina on pronotum (Fig. 8 B)......11 pronotum pronotum vertical carina oculo-malar space oculo-malar space antenna antenna

Fig. 8 A

Fig. 8 B

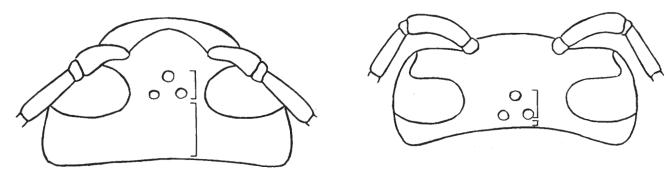

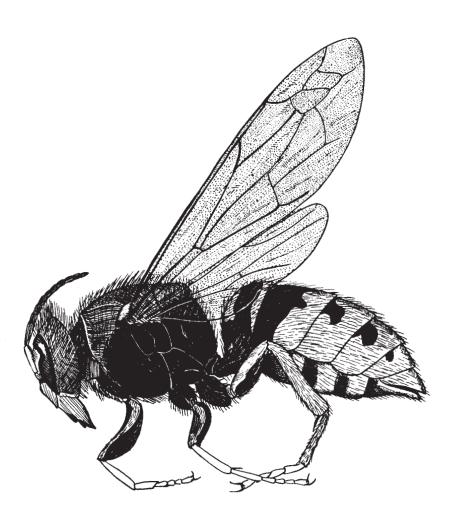

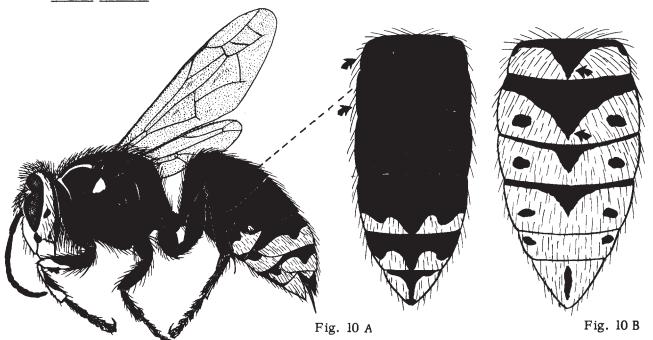

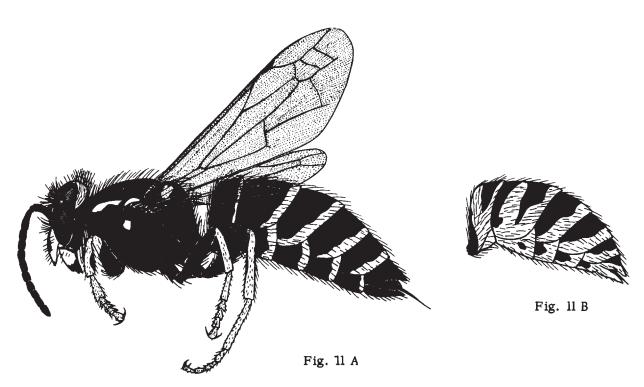

Fig. 9 A Fig. 9 B

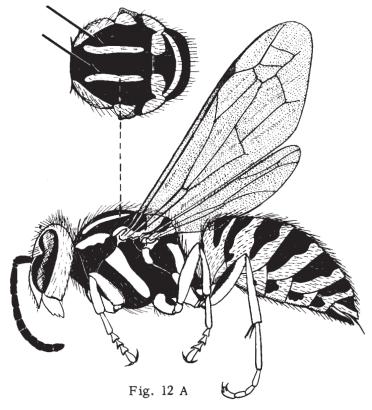

10. Black and white species; first and second abdominal segments entirely black, sometimes with very narrow pale markings at tip of first segments in some males (Fig. 10 A). Builds enclosed globular nests under eaves or in trees. (Vespula maculata)..........BALD-FACED HORNET

Mesonotum entirely black, or with two short yellowish stripes near scutellum (Fig. 12 B).....13

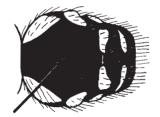

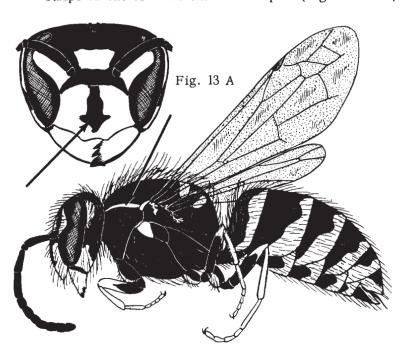

Fig. 12 B

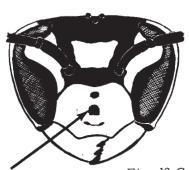

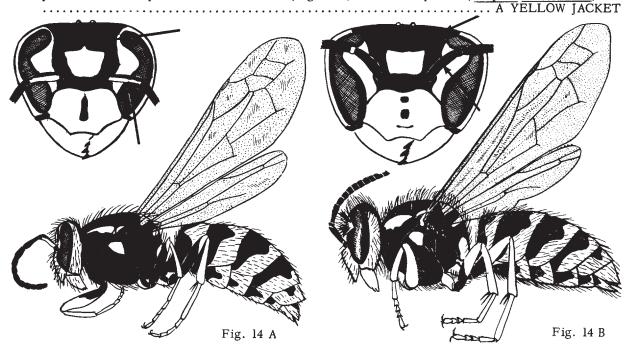

Fig. 13 C

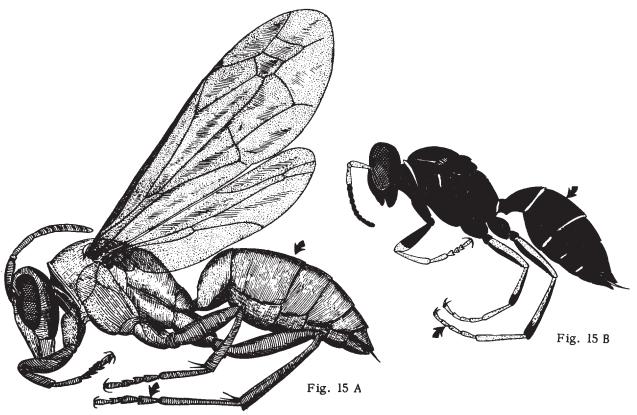

Ti~ 12 D

14. First antennal segment largely yellowish in front; eyes encircled by yellowish band on upper three-fourths (Fig. 14 A). Western species (Vespula pennsylvanica).....A YELLOW JACKET

First antennal segment largely or entirely blackish; eyes with a blackish area dorsally separating pale anterior and posterior orbital bands (Fig. 14 B). Eastern species (Vespula maculifrons)....

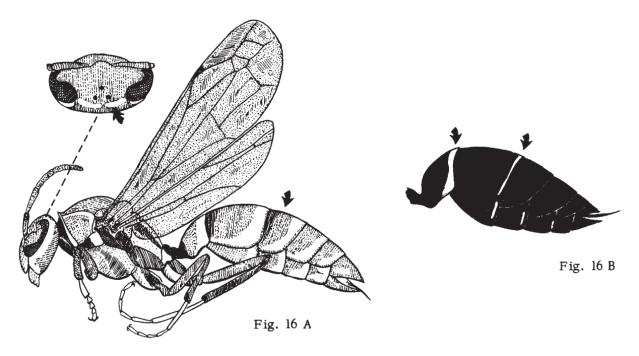

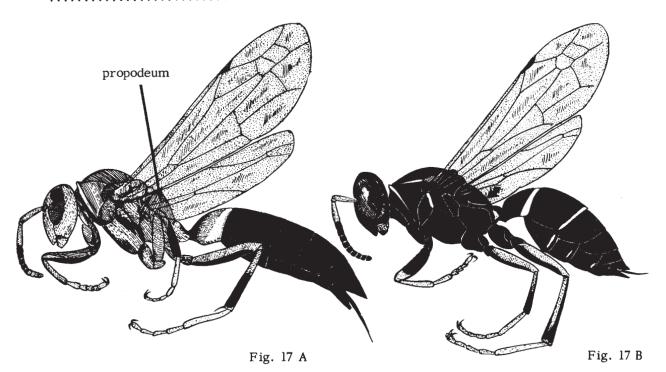

15. Body and all legs entirely or largely orange-colored (Fig. 15 A). Builds paper combs in walls of house or hollow trees. (Polistes rubiginosus)......OR ANGE PAPER WASP

16. Abdominal segments with blackish, yellowish, and reddish markings; mesonotum reddish; a yellowish band behind ocelli (Fig. 16 A). Builds single or double paper combs under eaves or in outbuildings. (Polistes exclamans).......ZEBRA PAPER WASP

Abdomen largely blackish, with one or more pale bands starting at posterior margin of first or second segment; mesonotum largely blackish; no yellowish band behind ocelli (Fig. 16 B)..... 17

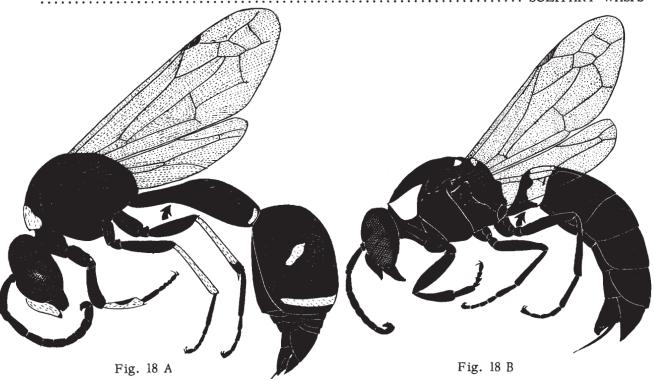

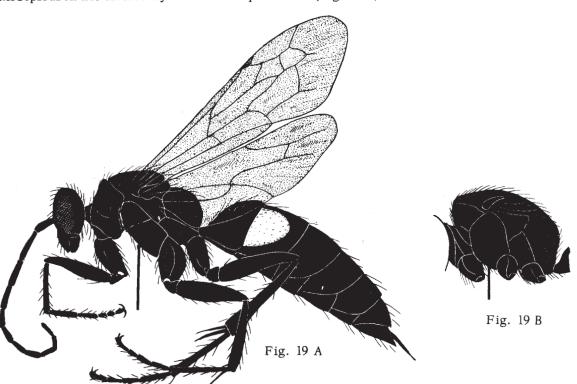

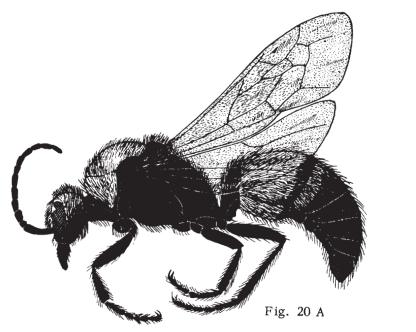

18. Slender species with extremely elongate first abdominal segment (Fig. 18 A). Builds small mud, potter nests provisioned with caterpillars. (Eumenes fraterna)............................ POTTER WASP

Stocky species, with stout first abdominal segment (Fig. 18 B). Nest in holes in ground or wood, or old mud-dauber nests provisioned with caterpillars. (Odynerus species and Monobia species)

SOLITARY WASPS

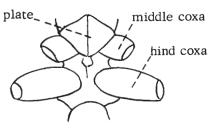

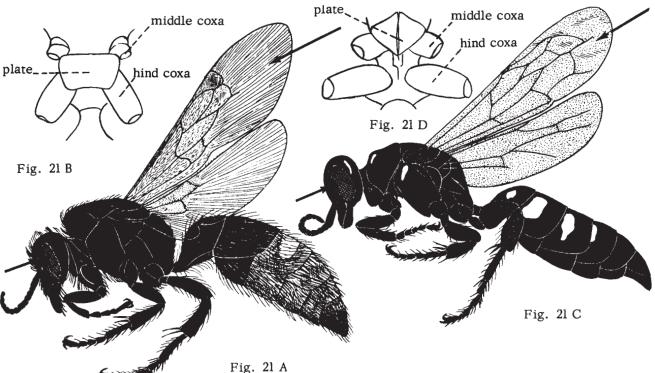

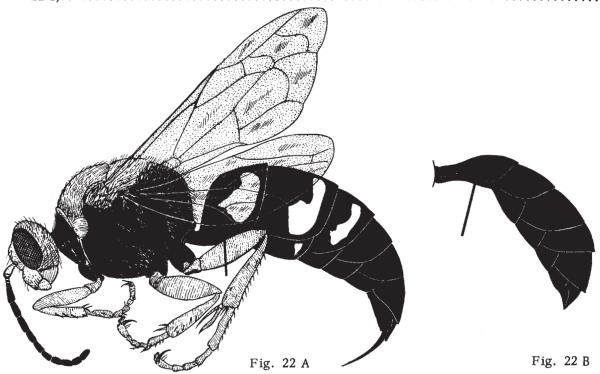

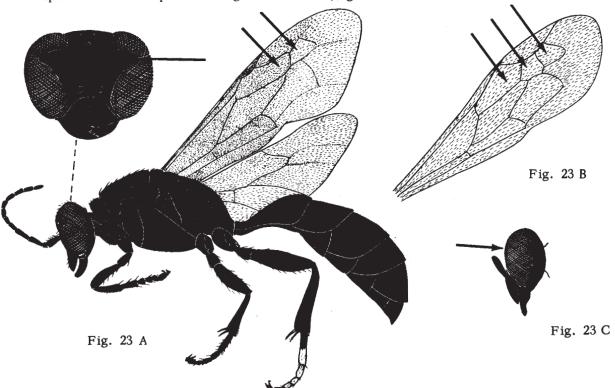

Fig. 20 B

22. Very large species, 30 mm. long or more; first abdominal segment broad and sessile (Fig. 22 A) Nest in holes in ground provisioned with cicadas. (Sphecius speciosus)......CICADA KILLER

Eyes nearly straight on inner side; three well-defined submarginal cells; metallic blue, or species with some pale markings on abdomen (Fig. 23 B & C)......24

24.	Petiole of abdomen two-segmented (Fig.	24 A).	Nest in holes in ground.	(Sphex species) SOLITARY WASP
	Petiole of abdomen one-segmented (Fig.	24 B)		
				Fig. 24 B
				Fig. 24 B
		F	ig. 24 A	
25.	Bright metallic-bluish species (Fig. 25 A (Chalybion californicum)). Bui	lds mud nests provisioned	with spiders
	Darker species with yellowish or orange	markir	ngs (Fig. 25 B)	26
		e and		
	Fig. 25 A			Fig. 25 B

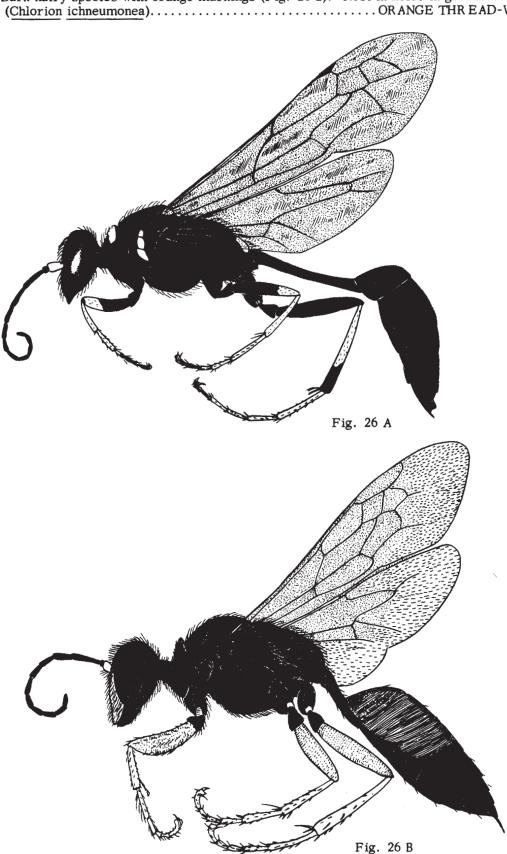

Fig. 27 A

Fig. 27 B

28. Oculo-malar space longer than second segment of antenna; large hairy species with contrasting blackish and yellowish (sometimes reddish) pile (Fig. 28 A). Colony builds wax combs in nests in ground or logs, often in old mouse nests. (Family Bombidae; Bombus sp.)....BUMBLEBEES

Oculo-malar space short, eye reaching (or nearly reaching) base of mandible (Fig. 28 B).....29

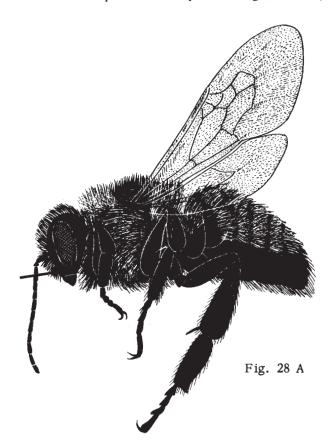

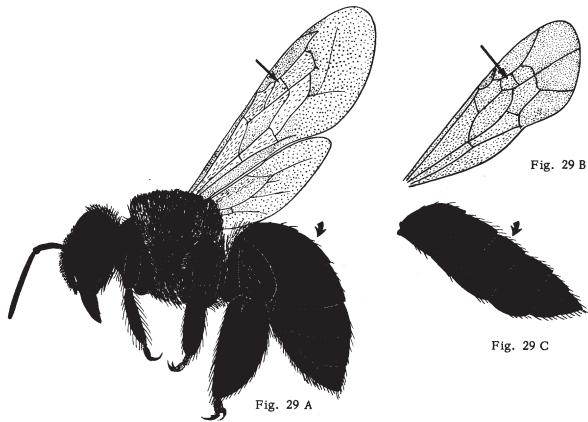

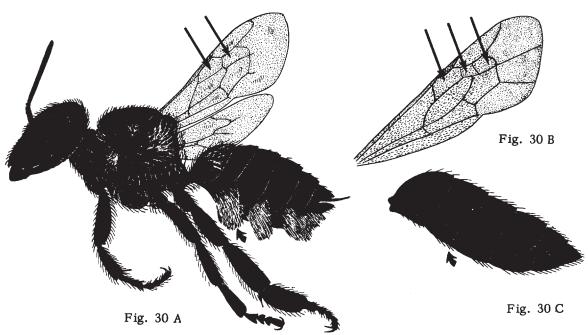

Fig. 28 B

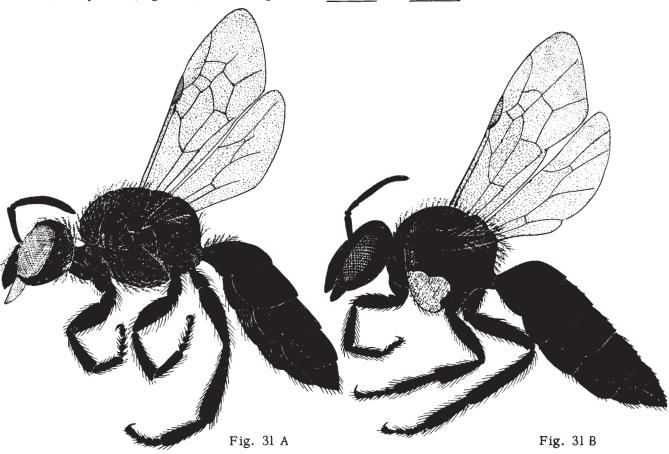

Smaller species 2-14 mm. long, usually with some hairs on upper surface of abdomen, shiny greenish species; second submarginal cell not narrowed anteriorly (Fig. 29 B & C)......30

30. Fore-wing with two submarginal cells; abdomen of female with dense hairy patches on underside (Fig. 30 A). Builds nest out of leaves in tree holes (Megachile species)... LEAFCUTTER BEES

Duller species (Fig. 31 B). Nest in ground. (Halictus and Andrena species)....SOLITARY BEES

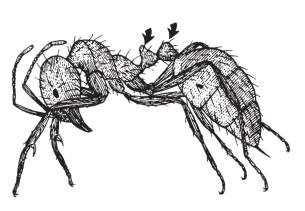

Fig. 32 B

33. Larger species 3-25 mm. long, usually with definite dark and reddish or orange-colored hairs (Fig. 33 A). Parasites of ground-nesting bees and wasps (Family Mutillidae)...VELVET ANTS

Smaller species 1-2 mm. long, with few sparse hairs; body various shades yellowish to brownish (Fig. 33 B). Parasites of wood-boring beetles (Family Bethylidae, Scleroderma species...

PARASITIC WASPS

Fig. 33 A

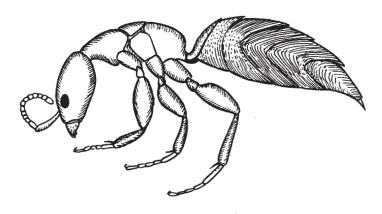

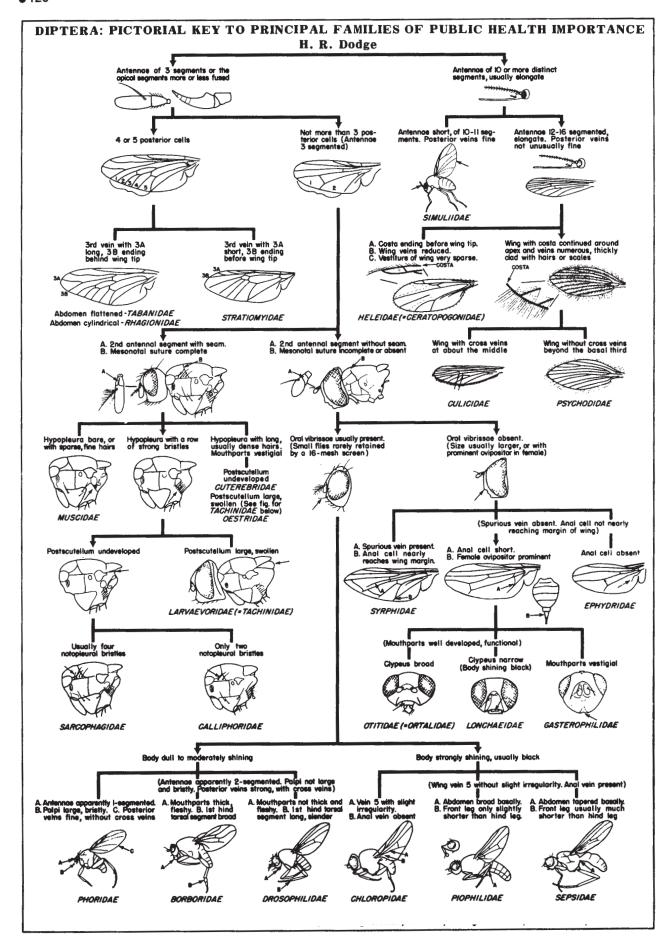

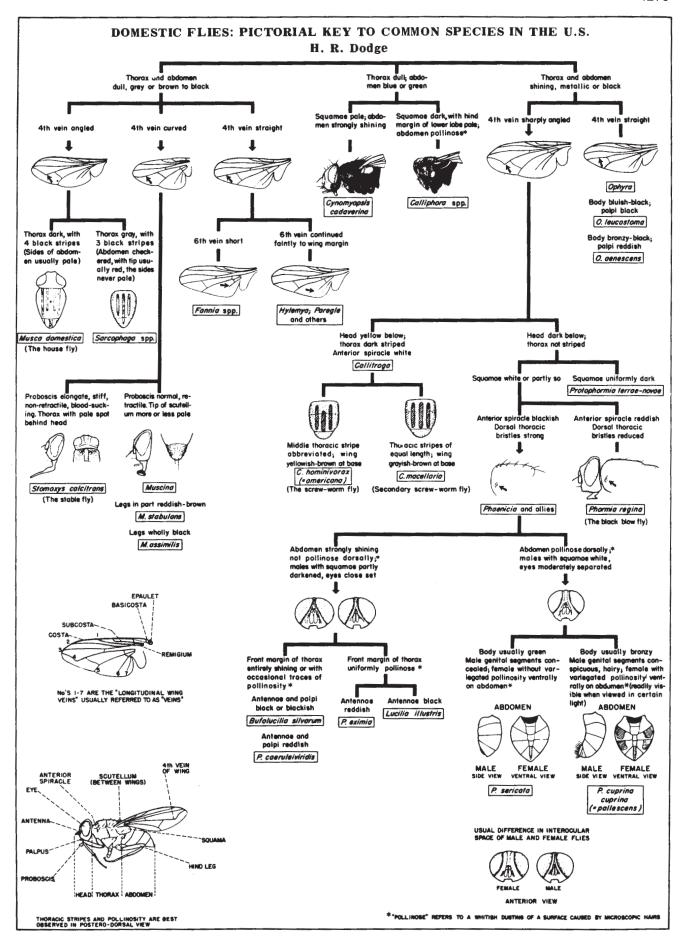

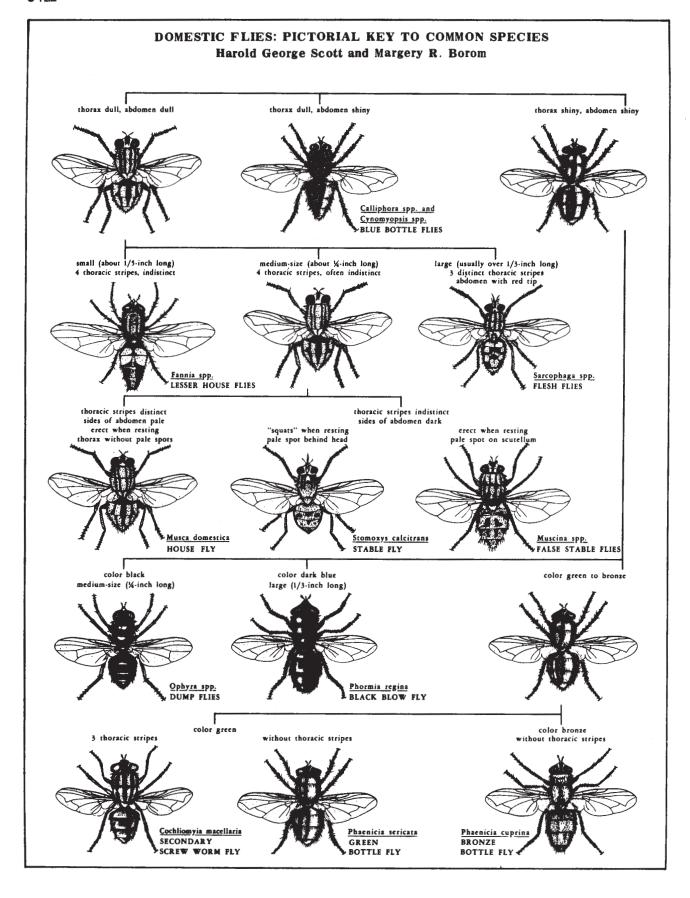

Fig. 33 B

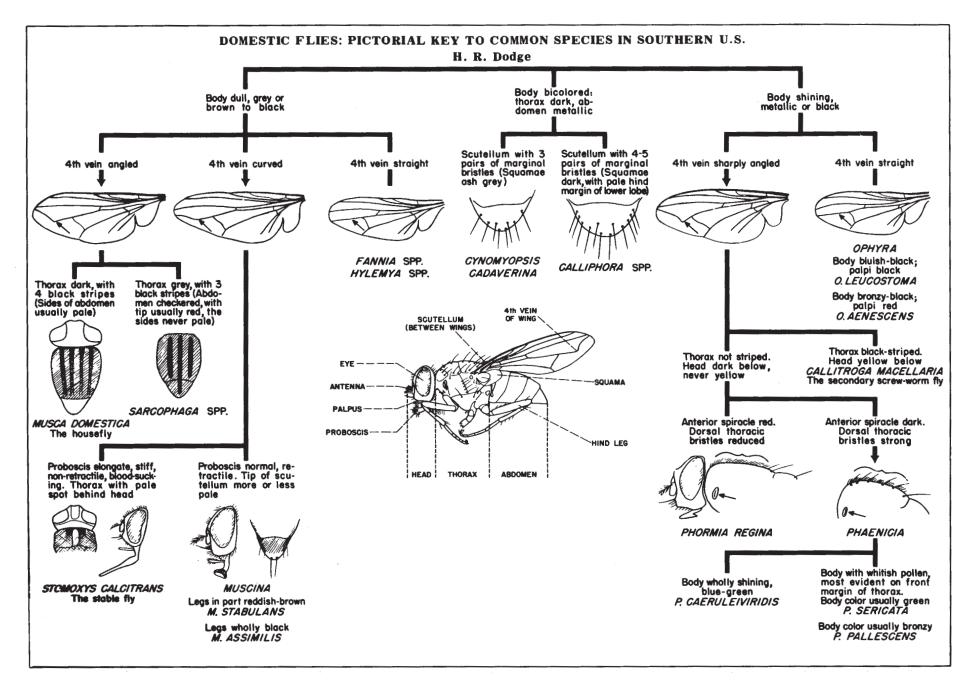

ANTS: KEY TO SOME COMMON SPECIES Harold George Scott

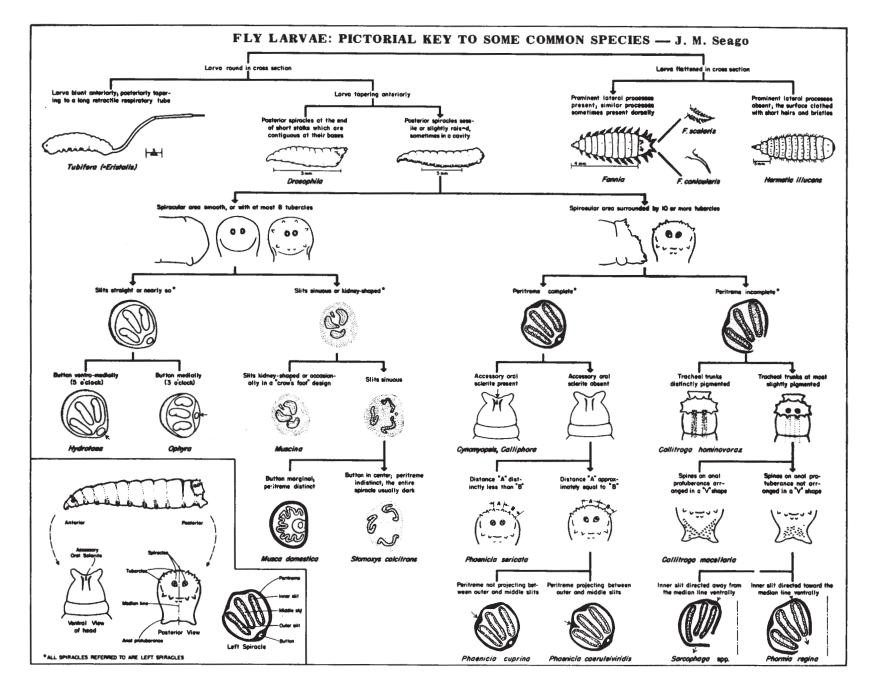

1.	Pedicel ("waist") 1-segmented
2.	Petiole (scale on pedicel) poorly developed, hidden beneath abdomen (Tapinoma sessile)
3.	Tip of abdomen without circlet of hairs (Iridomyrmex humilis) ARGENTINE ANT Tip of abdomen with circlet of hairs (Camponotus herculeanus pennsylvanicus)
4.	Head and thorax with numerous spines (Atta texana) TEXAS LEAF-CUTTING ANT Head and thorax spineless or with 1 pair of spines on the posterior thorax 5
5.	Thorax and head covered with "fingerprints"; posterior thorax with single pairs of spines (Tetramorium caespitum)
	pedicel antennal club
	Monomorium pharaonis Solenopsis molesta
6.	Antennal club 2-segmented
7.	Shiny-black (Monomorium minimum) LITTLE BLACK ANT Yellowish-red (Monomorium pharaonis) PHARAOH ANT
8.	House infesting ants (Solenopsis molesta)
9.	Mandibles strongly incurved (Solenopsis geminata)
10.	Dorsal surface of head with large coarse, scattered punctures (Solenopsis saevissima var. richteri)

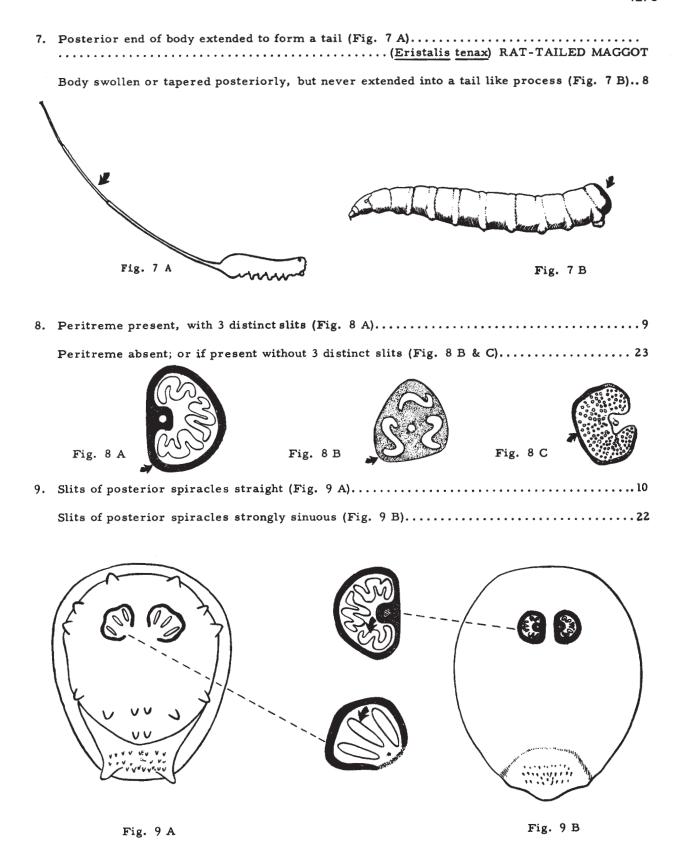

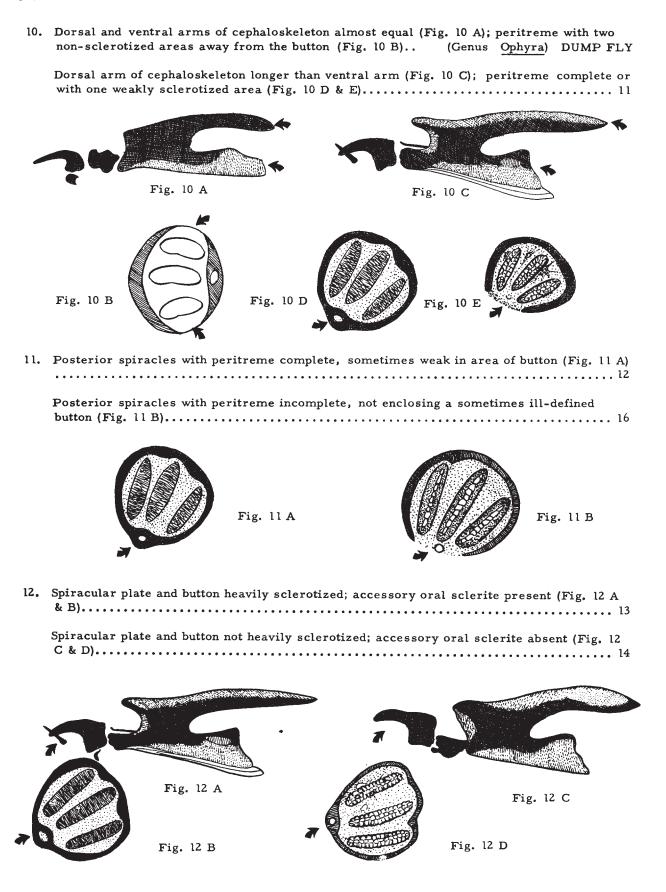

FLY LARVAE: KEY TO SOME SPECIES OF PUBLIC HEALTH IMPORTANCE Chester J. Stojanovich - Harry D. Pratt - Elwin E. Bennington

1.	Larva with a definite, hard, sclerotized head capsule (Fig. 1 A)
	Larva without a definite, hard, sclerotized head capsule (Fig. 1 B)
	Fig. 1 A Fig. 1 B
2.	Body flattened; large larvae 12-20 mm. long (Fig. 2 A) (Hermetia illucens) SOLDIER FLY
	Body cylindrical with spiracles opening in a tubular segment at posterior end of body, last segment modified into a sclerotized air tube (Fig. 2 B)
	Fig. 2 A
	** Fig. 2 B
3.	Body with spine-like dorsal and lateral processes on each segment; posterior spiracles on small elevations (Fig. 3 A)(Genus <u>Fannia</u>)
	Body smooth, or with short spines, but no long lateral processes (Fig. 3 B)
*	
*	Fig. 3 A Fig. 3 B

4. Processes branched or feathery (Fig. 4 A).....(Fannia scalaris) LATRINE FLY Processes without branches, spiny (Fig. 4 B)..(Fannia canicularis) LESSER HOUSE FLY Fig. 4 A Fig. 4B 5. Posterior spiracles on peg-like tubercles or cones; smaller larvae, usually 6-9 mm. long Posterior spiracles not on peg-like tubercles; larger larvae, usually 9-18 mm. long (Fig. 5 B)...... 7 Fig. 5 B 6. Posterior spiracles at ends of long tubercles (Fig. 6 A)..... (Genus Drosophila) VINEGAR FLIES Posterior spiracles on short cones, last segment with short finger-like lateral process (Fig. 6 B).....(Piophila casei) CHEESE SKIPPER Fig. 6 A Fig. 6 B

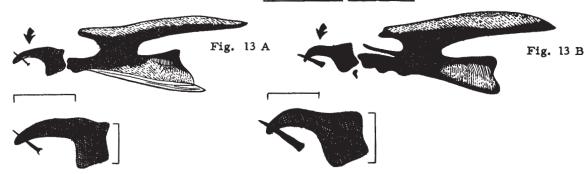

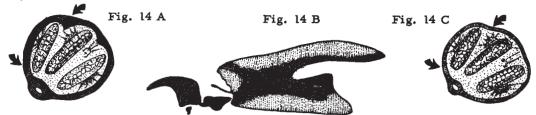

13. Mandibular sclerite with tooth longer than greatest width of basal portion (Fig. 13 A).....

(Calliphora vicina) A BLUE BOTTLE FLY

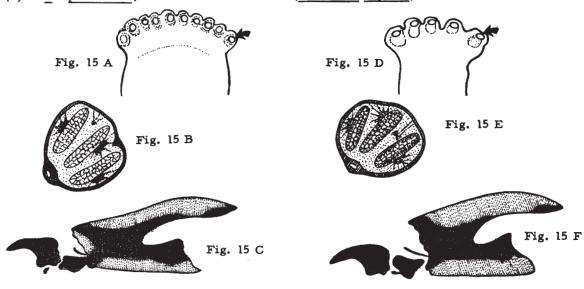

Mandibular sclerite with tooth only as long as greatest width of basal portion (Fig. 13 B)......(Cynomyopsis cadaverina) A BLUE BOTTLE FLY

Peritreme thin, usually with no projections or if present only slightly sclerotized (Fig. 14 C)......15

15. At least one of the prothoracic spiracles with 8 or more openings (Fig. 15 A); peritreme and cephaloskeleton as in figures 15 B & C. (Phaenicia sericata) A GREEN BOTTLE FLY

Pronotal combs present; genal comb present or absent (Fig. 1 B & C)...5

3. Ocular bristle in front of eye; mesopleuron divided by internal sclerotization; female with spermatheca partially pigmented (Fig. 3 A & B)...
.....(Genus Xenopsylla)......4

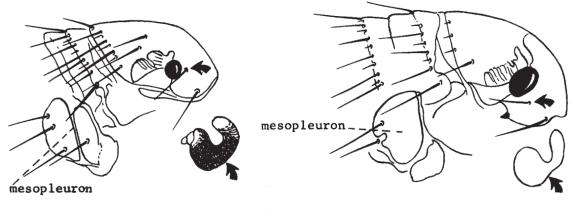

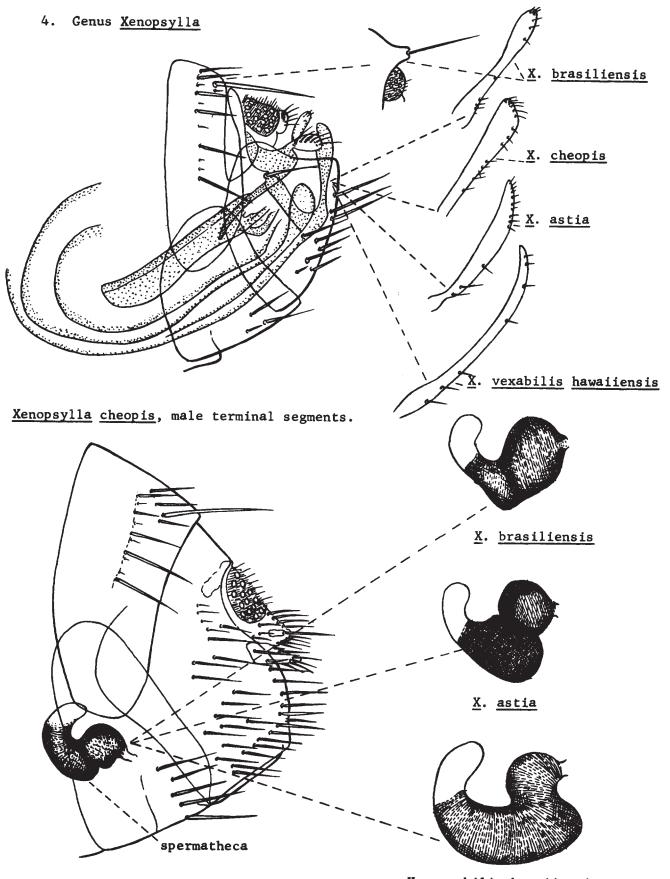

Fig. 3 A Fig. 3 B

Fig. 3 C

Fig. 3 D

<u>Xenopsylla</u> cheopis, female terminal segments

X. vexabilis hawaiiensis

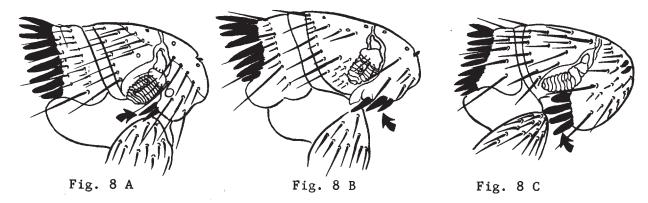

5. (Genal comb absent (Fig. 5 A)6
(enal comb present (Fig. 5 B)8
Fig	Fig. 5 B comb
6. I	ronotal comb with about 12 teeth on each side (Fig. 6 A). India Stivalius ahalae
	ronotal comb with 5 to 10 teeth on each side (Fig. 6 B)
	abial palpus long, extending beyond trochanter of first leg (Fig. 7 A). iamanus montanusROCK SQUIRREL FLEA
	abial palpus short, not extending to tip of coxa of first leg (Fig. 7 B) osopsyllus fasciatus
	Fig. 7 A Fig. 7 B labial palpus trochanter labial palpus

8. Genal comb with two teeth (Fig. 8 A)......(Genus Neopsylla)

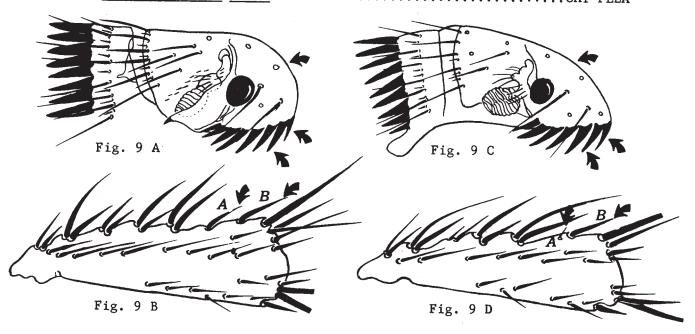

Neopsylla setosa important in U. S. S. R., Mongolia and Manchuria.

Genal comb with three teeth (Fig. 8 B).....(Genus Ctenophthalmus) Ctenophthalmus breviatus and pollex potential vectors in U. S. S. R.

Genal comb with four teeth (Fig. 8 C).....(Genus <u>Leptopsylla</u>) <u>Leptopsylla segnis</u> is cosmopolitan.

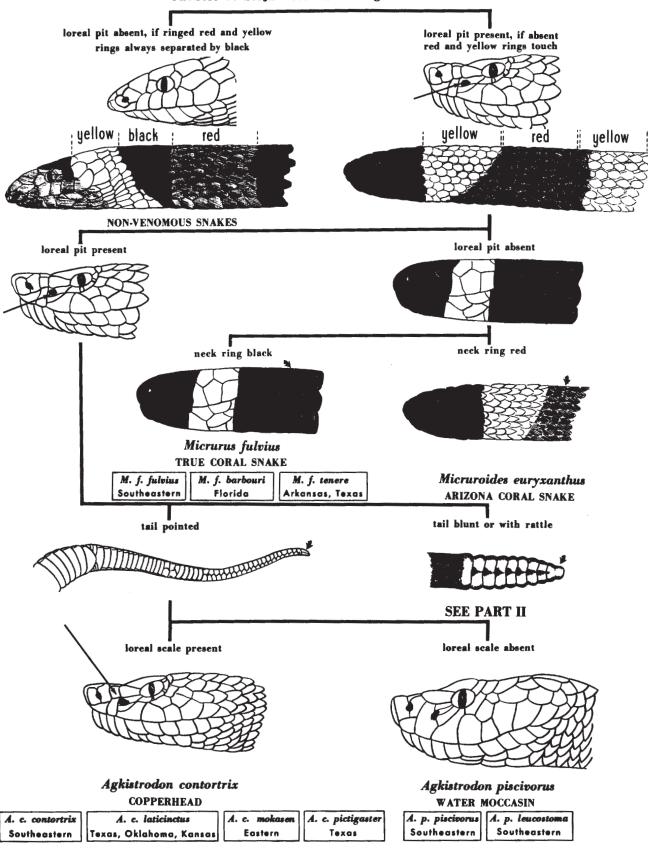

Genal comb with more than five teeth......(Genus Ctenocephalides). 9
